

4/4-way servo solenoid directional control valves, directly operated, with electrical position feedback and on-board electronics (OBE)

RE 29035/10.10
Replaces: 05.10

1/12

Type 4WRPEH6

Size 6
Unit series 2X
Maximum working pressure P, A, B 315 bar, T 250 bar
Nominal flow 2...40 l/min (Δp 70 bar)

Type 4WRPEH6

Features

- Directly operated servo solenoid directional control valve, with control piston and sleeve in servo quality
- Actuated on one side, 4/4 fail-safe position when switched off
- Electrical position feedback and on-board electronics (OBE), calibrated at the factory
- Electrical connection 6P+PE
Signal input differential amplifier with interface A1 ± 10 V or interface F1 4...20 mA ($R_{sh} = 200 \Omega$)
- Used in electrohydraulic controllers in production and testing systems

Function, sectional diagram

General

In the field of integrated electronics, the specified command value is compared with the actual position value. In case of deviations from the standard, the lifting solenoid is activated. Due to the changed magnetic force, the lifting solenoid adjusts the control valve against the spring. Lifting/control cross-section are adjusted proportionally to the command value. In case of a command value provision of 0 V, the electronics adjusts the control valve against the spring to center position. In deactivated condition, the spring is unloaded to a maximum and the valve is in fail-safe position.

Switch-off behavior

If the electronics is switched off, the valve immediately moves to the secured basic position (fail safe). In this process, the P-B/A-T position is passed which might cause movements at the controlled component. This must be taken into account when designing the plant.

- 1 Control solenoid with position transducer
- 2 Valve body
- 3 Plug for possible 2nd stage
- 4 Plug in connector

¹⁾ The purity classes stated for the components must be complied with in hydraulic systems.
Effective filtration prevents problems and also extends the service life of components.
For a selection of filters, see www.boschrexroth.com/filter.

Technical notes on the cable

- Version:**
- Multi-wire cable
 - Extra-finely stranded wire to VDE 0295, Class 6
 - Protective conductor, green/yellow
 - Cu braided screen
- Types:**
- e.g. Ölflex-FD 855 CP (from Lappkabel company)
- No. of wires:**
- Determined by type of valve, plug types and signal assignment
- Cable Ø:**
- 0.75 mm² to 20 m length
 - 1.0 mm² to 40 m length
- Outside Ø:**
- 9.4...11.8 mm – Pg11
 - 12.7...13.5 mm – Pg16

Note

Voltage supply 24 V DC_{nom}, if voltage drops below 18 V DC, rapid shutdown resembling “Enable OFF” takes place internally.

In addition, with F1 version:

$I_{D-E} \geq 3 \text{ mA}$ – valve is active

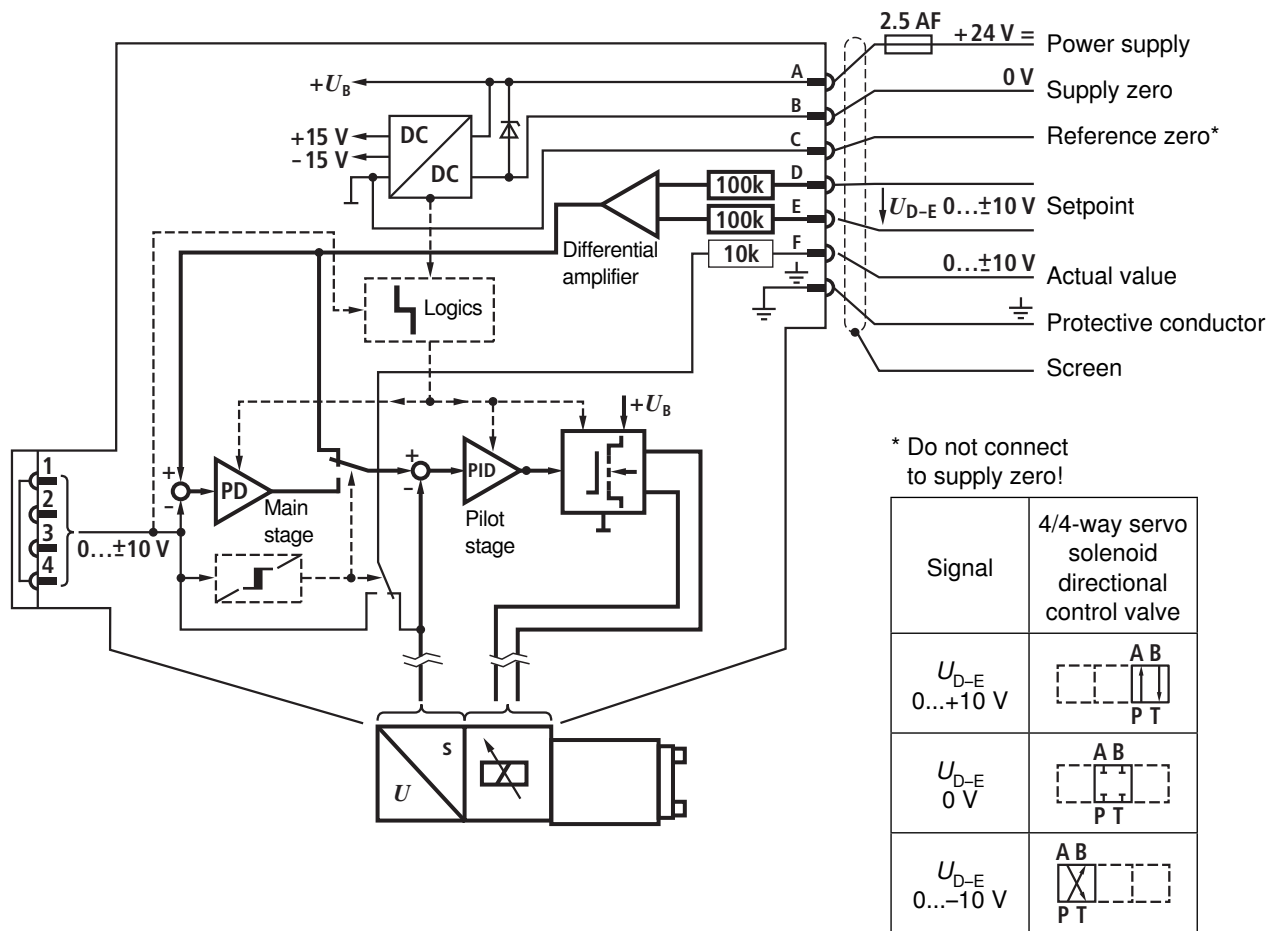

$I_{D-E} \leq 2 \text{ mA}$ – valve is deactivated.

Electrical signals emitted via the trigger electronics (e.g. actual values) must not be used to shut down safety-relevant machine functions! (See European Standard, “Technical Safety Requirements for Fluid-Powered Systems and Components – Hydraulics”, EN 982.)
