Cylindrical Compact Inductive Proximity Sensor Amplifier Built-in SERIES

Robust enclosure and bending-resistant cable types are also available

GX-3S□

VARIETIES

Miniature

GX-3S is an amplifier built-in inductive proximity sensor having a diameter of just ø3.8 mm ø0.150 in.

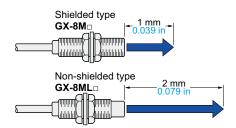

BASIC PERFORMANCE

Long sensing range

GX-8ML□

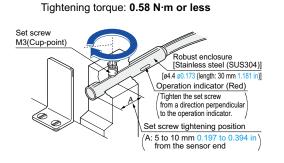

The non-shielded type (GX-8ML) has twice the sensing range of the shielded type (GX-8M), although having the same size. Hence, it allows margin against sensing distance variations.

Robust housing

GX-4S□

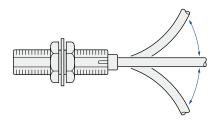

The **GX-4S** uses a robust stainless steel enclosure. The tightening torque can be 0.58 N m or less. (2 times compared with conventional models)

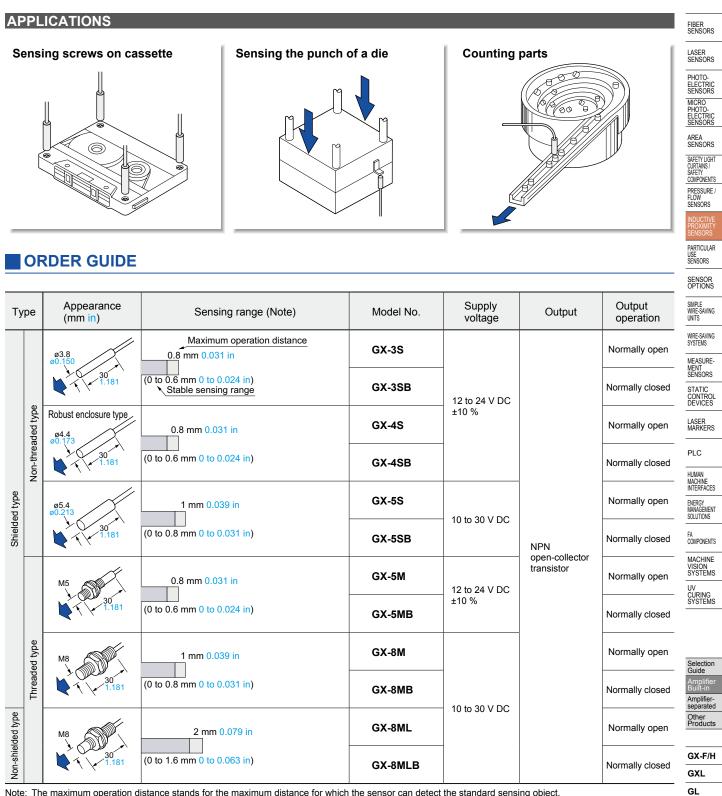

ENVIRONMENTAL RESISTANCE

Ten times greater bending durability (Compared with conventional models) GX-□-R

The bending durability of the cable to repeated bending has been increased tenfold by using special alloy cores for the cable.

Buy: www.ValinOnline.com | Phone 844-385-3099 | Email: CustomerService@valin.com

Note: The maximum operation distance stands for the maximum distance for which the sensor can detect the standard sensing object.

The stable sensing range stands for the sensing range for which the sensor can stably detect the standard sensing object even if there is an ambient temperature drift and/or supply voltage fluctuation.

ORDER GUIDE

Bending-resistant cable type

Bending-resistant cable type is also available for shielded type. When ordering this type, suffix "-**R**" to the model No. (e.g.) Bending-resistant cable type of **GX-3S** is "**GX-3S-R**".

5 m 16.404 ft cable length type

5 m 16.404 ft cable length type (standard: 3 m 9.843 ft) is also available. (excluding **GX-4SB**) When ordering this type, suffix "-**C5**" to the model No. (e.g.) 5 m 16.404 ft cable length type of **GX-3S** is "**GX-3S-C5**".

Refer to table below for 5 m 16.404 ft cable length type of bending-resistant cable type sensor.

Table of model Nos.

	Standard	Bending-resistant cable of 5 m 16.404 ft cable length type
	GX-3S	GX-3S-R-C5
type	GX-3SB	GX-3SB-R-C5

reade	GX-8M	GX-8M-R-C5
μ	GX-8MB	GX-8MB-R-C5
	Threaded type Non-threaded type	edfit pepeer edfit peper edfit

Accessories

- MS-SS3 (Sensor mounting bracket for GX-3S type)
- MS-SS3-2 (C bracket for GX-3S type)
- MS-SS5 (Sensor mounting bracket for GX-5S type)

• MS-SS3-2

К

By using the C bracket, the applicable tightening force can be doubled.

I/O circuit diagram

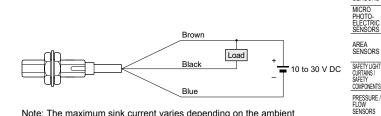

Symbols ... D : Reverse supply polarity protection diode ZD: Surge absorption zener diode Tr : NPN output transistor

• If a capacitor of 1 µF or more is connected between 0 V and output or between +V and output, connect a 100 Ω resistor in series as shown below.

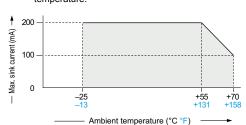

Without the resistor, the shortcircuit protection is activated by the charge or discharge current of the capacitor, so that it results in delaying the response whenever the sensor switches. The connected resistor solves this problem.

Note: The maximum sink current varies depending on the ambient temperature.

PRECAUTIONS FOR PROPER USE

Never use this product as a sensing device for personnel protection.
In case of using sensing devices for

personnel protection, use products which meet laws and standards, such as OSHA, ANSI or IEC etc., for personnel protection applicable in each region or country.

Mounting

• The tightening torque should be as given below.

Mounting with set screw

<Shielded of threaded type>

• Tighten the set screw on the flat surface of the sensor without applying excessive force. Make sure to use a set screw with a cup-point end.

Note: To fasten $\textbf{GX-5M}\square,$ use a M3 or less set screw.

Model No.	Set screw tightening position A (mm in)	Tightening torque
GX-5M□	5 to 10 0.197 to 0.394	0.29 N·m
GX-8M□	8 to 22 0.315 to 0.866	0.29 N·m

<Non-threaded type and non-shielded of threaded type>

B-B-(M4 or less)	Ν	lodel No.	B (mm in)	C (mm in)	Tightening torque
	GX-3S□ When using the C bracket		5 to 10	3	0.29 N·m
c///////			0.197 to 0.394	0.118	0.58 N∙m
	GX-4S□		5 to 10 0.197 to 0.394	3 0.118	0.58 N∙m
	GX-5S□		8 to 20 0.315 to 0.787	5 0.197	0.29 N∙m
	G	X-8ML□	13 to 22 0.517 to 0.866	10 0.394	0.29 N∙m

Note: The protrusion should be kept C (mm in) or more to avoid reduction of sensing range.

• To fasten **GX-3S** and **GX-4S**, use a M3 or less set screw and tighten it from a direction perpendicular to the operation indicator.

• When using the C bracket, place it on the sensor at a distance of 3 mm 0.118 in or more from the sensor end.

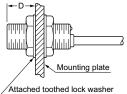

• To fasten the non-shielded threaded type, tighten the set screw on the flat surface of the sensor.

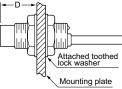

-	-	 r.	-	-	-	5	-	-	T.

Mounting with nut

• Note that the maximum tightening torque differs according to the location of the nuts.

Shielded of threaded type> <Non-shielded of threaded type>

Refer to p 1579~ for general precautions

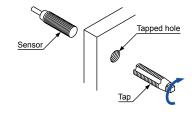

(2 pcs. attached for "-**R**" type only)

Model No.	D (mm in)	Tightening torque
GX-5M□	2 to 3 0.079 to 0.118	0.49 N∙m
GX-5IVID	3 0.118 or more	1.47 N·m
GX-8M□	3 to 11 0.118 to 0.433	1.47 N·m
	11 0.433 or more	3.43 N∙m
GX-8ML□	9 to 11 0.345 to 0.433	0.98 N∙m
	11 0.433 or more	3.43 N∙m

Note: Mount such that the nuts do not protrude from the threaded portion.

• The root truncation of the threads with **GX-8M**_□ and **GX-8ML**_□ is shallow owing to strengthening of the sensors against tightening.

When tapped hole on equipment to fix the sensors, the prepared hole must be 0.283 in or more.

PRECAUTIONS FOR PROPER USE

Distance from surrounding metal

• As metal around the sensor may affect the sensing performance, pay attention to the following points.

Influence of surrounding metal

 The surrounding metal will affect the sensing performance. Keep the minimum distance specified in the table below.

Background metal/

Model No.	E (mm in)	
GX-3S□	3 0.118	
GX-4S□	3 0.118	
GX-5S□	4 0.157	
GX-5M□	3 0.118	
GX-8M□	4 0.157	
GX-8ML□	8 0.315	

Embedding of the sensor in metal

• Sensing range may decrease if the sensor is completely embedded in metal. Especially for the non-threaded type and the non-shielded type, keep the minimum distance specified in the table below.

Model No.	F (mm in)	G (mm in)
GX-3S□	ø12 ø0.472	3 0.118
GX-4S□	ø12 ø0.472	3 0.118
GX-5S□	ø15.4 ø0.606	5 0.197
GX-8ML□	ø30 ø1.181	10 0.394

Mutual interference

 When two or more sensors are installed in parallel or face to face, keep the minimum separation distance specified below to avoid mutual interference.

Face to face mounting

Parallel mounting

Model No.	H (mm in)	J (mm in)
GX-3S□	16 0.630	16 0.630
GX-4S□	16 0.630	16 0.630
GX-5S□	20 0.787	15 0.591
GX-5M□	10 0.394	10 0.394
GX-8M□	20 0.787	15 0.591
GX-8ML□	50 1.969	30 1.181

Refer to p.1579~ for general precautions.

Sensing range

 The sensing range is specified for the standard sensing object. With a non-ferrous metal, the sensing range is obtained by multiplying with the correction coefficient specified below. Further, the sensing range also changes if the sensing object is smaller than the standard sensing object or if the sensing object is plated.

Correction coefficient

Model No. Metal	GX-3S□ GX-4S□	GX-5M□	GX-5S□ GX-8M□ GX-8ML□
Iron	1	1	1
Stainless steel (SUS304)	0.65 approx.	0.83 approx.	0.7 approx.
Brass	0.36 approx.	0.61 approx.	0.4 approx.
Aluminum	0.30 approx.	0.58 approx.	0.35 approx.

Others

- Do not use during the initial transient time (10 ms) after the power supply is switched on.
- Make sure that stress by forcible bend or pulling is not applied directly to the sensor cable joint.
- GX-3S□, GX-4S□ and GX-5M□ do not incorporate a short-circuit protection circuit at the output. Do not connect them directly to a power supply or a capacitive load.
