

Belt Driven Positioners

Belt-driven actuators are ideal for high speed, industrial automation applications. These positioners are used in either single or multi-axis configurations such as gantry robots, and are ideal for applications such as palletizing, storage and retrieval, machine loading, parts handling, material handling and automated assembly. Parker offers a wide array of belt driven positioners with thousands of configurable options that are able to scale to solve virtually any automation application. Parker can construct these positioners into complete motion systems, integrating motors, drives, controls, HMI, cable management, machine frames and guarding. Contact your Parker application engineering expert to help construct a complete system to fit your needs.

Parker Belt Driven Industrial Systems

Product Comparisons: Parker high-speed belt driven actuators are segmented into specific series that are distinguished by guidance technology as well as frame size and corresponding loading properties. All products are able to be pre-configured with Parker motor and gearheads or common industry mounting options.

HMR High Moment Rodless Series Industrial Belt Driven Positioners

The user-friendly and versatile HMR has enormous moment and payload capacity bundled in a low-profile, yet sleek package. The HMRB is ideal for long travel lengths and high speed dynamic positioning.
Page 159.

OSPE..BHD Series Belt-Driven Positioners

The OSPE..BHD offers a compact design ideal for high-speed, long travel, heavy duty applications requiring robustness, dynamic precision, and extraordinary performance.
Page 190.

OSPE..B Series Belt-Driven Positioners

Ideal for precise point-to-point applications, the OSPE..B offers high-speed operation, easy installation, and low maintenance.
Page 207.

OSPE..BV Series Belt-Driven Positioners

Robust and compact, the OSPE..BV is a vertical fixed belt-driven actuator with integrated ball bearing guide designed to lift loads in a vertical orientation.

LCR Series Light-Capacity Belt-Driven Positioners

The LCR Series is a completely pre-engineered, pre-tested, ready-to-use positioner solution for unmatched, easy-to-use flexibility.
Page 235.

HPLA Belt-Driven Linear Modules

Strong and rugged, the HPLA is a "next generation" linear module. The series offers high speed, high acceleration, and long travel, combined with stiff, rigid construction characteristics.
Page 247.

HLE-RB Belt-Driven Linear Modules

The HLE line is a proven performer offering long life and trouble-free operation, ideal as single axis products or as components for high speed multi-axis gantries. Roller Bearing system.
Page 261.

HLE-SR Belt-Driven Linear Modules

The HLE line is a proven performer offering long life and trouble-free operation, ideal as single axis products or as components for high speed multi-axis gantries. Square Rail bearing system.
Page 276.

HZR Vertical-Axis Belt Driven Positioners

The HZR is a rugged vertical axis unit unique to the high speed automation industry designed for mechanical demands placed on the vertical axis of a multi-axis gantry robot.

Additional Capabilities: Gantry Systems

Page 293.

Parker's gantry systems provide cost-effective, easy to integrate solutions that satisfy the vast majority of automation requirements. In addition to these standard gantry systems, Parker offers products with additional capabilities to fulfill the needs of special applications. Our engineering skill and manufacturing expertise have integrated these products into custom-tailored gantry solutions which have successfully addressed the most unique and exacting requirements of machine builders and integrators around the world.

The HMRB Series

FEATURES

HMRB Belt-Driven Actuators
for High Speed, High Payload Positioning Applications

Belt Driven
Tables

- High dynamic control for precision positioning
- High payload capacity
- High speed operation
- Easy installation
- Highly configurable design
- Ideal in multi axis applications

Features

- 5 different frame sizes to choose from
- Basic or reinforced profiles for supported or unsupported applications
- Tandem carriage with second carriage for higher load capabilities
- Bi-parting carriage for centering applications
- Long available strokes
- Complete motor and drive packages
- Ambient operating temperature range -20°C to +80°C
- IP 54 Rating

Standard
Profile

Reinforced
Profile

HMRB08 HMRB11 HMRB15 HMRB18 HMRB24

	HMRB08	HMRB11	HMRB15	HMRB18	HMRB24
Maximum Travel (mm)	3000	4000	5800	5800	5800
Maximum Payload (N)	1800	4450	8800	16200	26600
Maximum Acceleration (m/sec ²)	10	10	10	10	10

The HMRB is the belt driven version in the HMR family. The steel reinforced timing belt used on this positioner features a round tooth profile for greater energy

efficiency and smoother overall motion, as compared to traditional belt profiles. The HMRB is ideal for long travel lengths and high speed dynamic positioning.

The compact design allows integration of the HMRB in any machine layout, providing superior dynamic performance with minimal space utilization.

- ① Drive shaft**
Designed to pair with a large assortment of motor and gearhead options
- ② Steel reinforced timing belt**
High thrust force transmission and long life
- ③ Carriage assembly**
Low profile, high strength aluminum construction with threaded and pinning mounting options
- ④ Lubrication ports**
Easy access maintenance (1x per side) allows for single point lubrication for all bearing trucks and the ball nut at any location along travel
- ⑤ Corrosion resistant steel sealing band**
Magnetically fastened to the actuator body and provides IP54 sealing
- ⑥ Slotted profile**
Dovetail grooves for actuator & sensor mounting
- ⑦ Recirculating profile rail bearing**
Two rails and four bearing trucks total for maximized payload capacity

Profile Options

Basic profile - for applications where actuator is fully supported, this option provides a lower profile option.

Reinforced profile - for long unsupported spans (i.e. gantry style applications).

Carriage Options

Standard carriage or tandem carriage for higher load capabilities

Cover Options

IP20 rated without protective cover, or IP54 rated protective cover with seal strip cover assemblies—ideal for harsh environments

Motor Mounting Options

The HMRB belt driven positioner is designed to optimize flexibility in machine design. As such the drive and motor mounting can be positioned at any one of four different positions around the axis of motion. This option is configurable through the part number.

Multi-axis Systems

A wide range of adapter plates and intermediate drive shafts simplifies engineering and installation.

**Please consult factory for your individual system design.*

Other Options & Accessories

HMRB actuators can be outfitted with a variety of different options.

In addition to the standard configurable options highlighted in Options & Accessories, a list of commonly used non-standard options are highlighted below. Please contact us for assistance in choosing any of these or any other unique configurations.

- **Dual axis with link shaft**
- **Purge ports**
- **Parallel motor mount**
- **Longer than cataloged stroke**
- **...and many more**

SPECIFICATIONS

SPECIFICATIONS

Parker Hannifin's High Moment Rodless (HMR) Series electric linear actuator is one of the most user friendly and versatile actuator lines on the market today. Guided by two square rail bearings, the HMR has enormous moment and payload capacity bundled in a low-profile, yet sleek package. With five different frame sizes, two different drive train options, multiple mounting, carriage and sensor options, and an IP54 protective cover option—along with a multitude of other customizable features—the HMR was truly designed with flexibility in mind.

Common Specifications

Inertia per 1 m order stroke	J_{mt} [kgmm ² /m]	134	222	689	900
Inertia per 1 kg moving mass	J_{kg} [kgmm ² /kg]	428	570	649	1,271

Inertia total HMRB: $J_{tot} = J_0 + \text{order stroke} * J_{mt} + m_c * J_{kg} + m * J_{kg}$

HMR Loading Conditions

Loading conditions, including external forces and moment loading, are application dependent. The center of gravity for the mass/payload attached to the carriage must be determined in order to properly size the ideal actuator for your application. Please note that when selecting the proper HMR actuator for your system the sum of all loading should not exceed "1" as per the formula below.

Loads, forces, and bending moments

Calculating Load Factors - Combined Normal and Moment Load

The sum of combined loads (static and dynamic) must not exceed "1" at any time as shown in the formula below:

$$L = \frac{F_y}{F_{y(max)}} + \frac{F_z}{F_{z(max)}} + \frac{M_x}{M_{x(max)}} + \frac{M_y}{M_{y(max)}} + \frac{M_z}{M_{z(max)}} \leq 1$$

$M = F \times d \text{ (Nm)}$
 $M_x = M_{x \text{ static}} + M_{x \text{ dynamic}}$
 $M_y = M_{y \text{ static}} + M_{y \text{ dynamic}}$
 $M_z = M_{z \text{ static}} + M_{z \text{ dynamic}}$

Internal lever arm l_{zi}

Dimensions - Internal lever arm l_{zi}

Product size	l_{zi}
HMRx085	[mm] 33.0
HMRx110	[mm] 39.5
HMRx150	[mm] 50.0
HMRx180	[mm] 57.5
HMRx240	[mm] 68.0

Maximum Permissible Unsupported Length — *Determining actuator mounting placement*

HMR Series actuators need to be mounted onto a solid machine base or frame structure using appropriately positioned actuator mounts. This ensures that the actuator will not undergo excessive deflection based on the application's load and length requirements.

The greater the load and/or the longer the unsupported length between mounts, the more the actuator is susceptible to deflection.

Deflection is also dependent on the carriage orientation (F_z for standard mounted actuator or F_y for a side mounted actuator).

Example F_z HMR 11:

For a 3160 N load, the distance "d" between supporting elements is 700 mm.
For mounting accessories see "Actuator Mounting" in Options & Accessories.

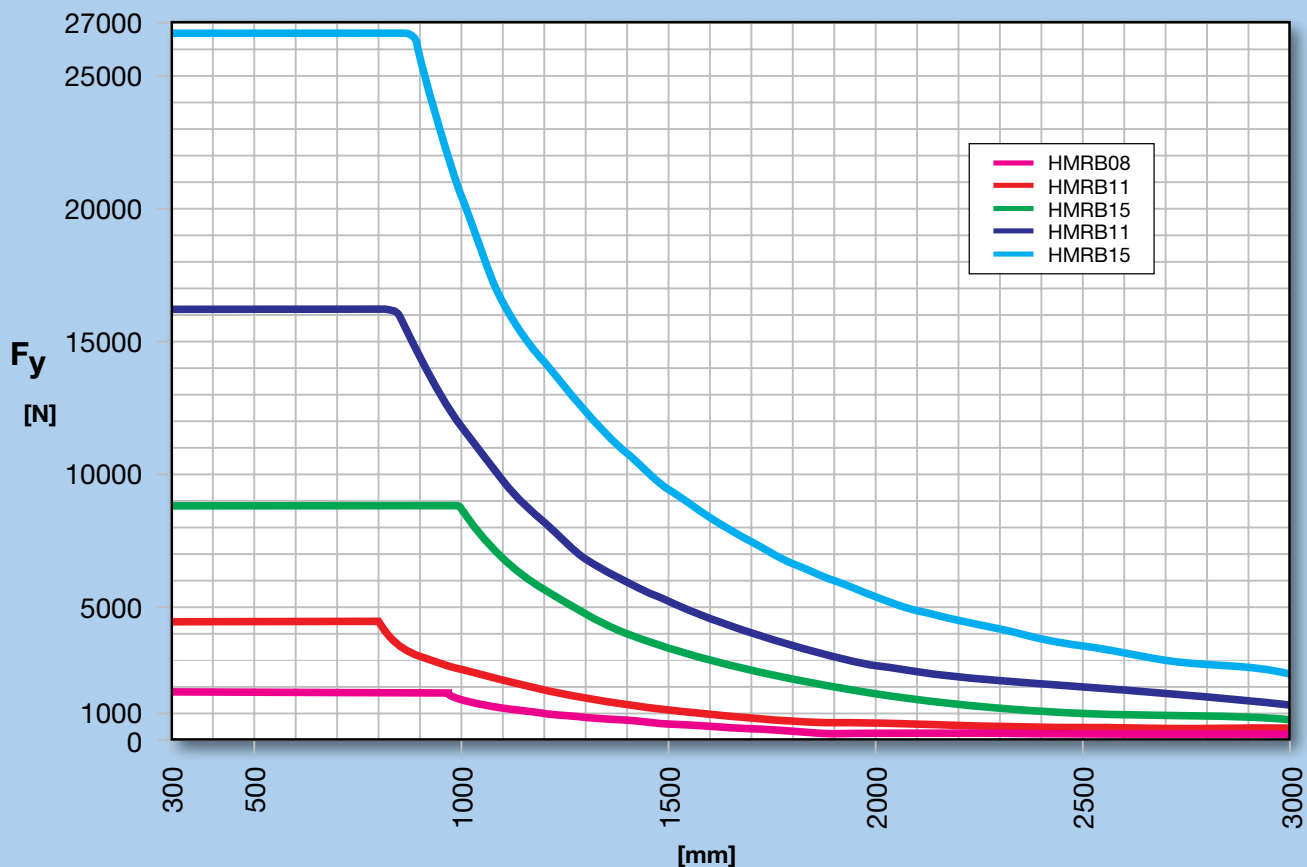

Maximum Permissible Unsupported Length — *Determining actuator mounting placement*

Use the appropriate deflection graph to ensure that the application load does not exceed the deflection curve. Supporting the actuator within the recommended maximum distance “k” will ensure that the installation will have a maximum deflection equal to 0.01% of distance “k.”

To further reduce deflection, simply reduce the distance between actuator mounts as described in the examples below.

Maximum admissible loads [N] and supporting distances [mm] (self-supporting- *reinforced profile only*)

Example F_y HMR 11:

For a 3160 N load, the distance “d” between supporting elements is 900 mm.
For mounting accessories see “Actuator Mounting” in Options & Accessories.

DIMENSIONS

Dimensions – (mm)

HMR actuators can be configured with either "Basic" or "Reinforced" profiles based on applications demands. Basic profiles are suitable for applications where the actuator is secured to a machine base and constantly supported. Reinforced profiles can be utilized in applications with unsupported spans. See Maximum Permissible Unsupported Length for mounting support instructions.

Dimensions – mm

Stroke depending dimensions

- ES = Effective Stroke
- SS = Safety Stroke
- CD = Carriage distance
- CL = Carriage length Standard
- S = Stroke
- OS = Order Stroke
- OAL = Over All Length

Option Carrier Standard

Order stroke OS = Effective stroke ES + 2 x Safety stroke SS

Over all length OAL = Order stroke OS + Carrier length CL + 2 x End cap length X

Option Carrier Tandem

Order stroke OS = Effective stroke ES + 2 x Safety stroke SS + Carrier distance CD (not shown)

Over all length OAL = Order stroke OS + 2 x Carrier length CL + 2 x End cap length X

Option Carrier Bi-part for opposite movements

Order stroke OS = 2 x Stroke S = 2 x Effective stroke ES + 4 x Safety stroke SS + Carrier distance CD (not shown)

Over all length OAL = Order stroke OS + 2 x Carrier length CL + 2 x End cap length X

¹ When ordering with actuator, use order code ① to specify appropriately sized gearhead mounting kit, and order code ③ to specify drive shaft orientation. See Ordering Information.

Mounted Gearhead with Motor Mounting Kit Options

Mounted Gearhead with Motor Mounting Kits include a coupling housing, coupling, flange, and gearhead with coupler and flange.

A = Bolt circle diameter
B = Screw for bolt circle
C = Square dimension
D = Pilot diameter
E = Pilot depth of the flange
F = Input drive shaft diameter
G = Input drive shaft length
LCH = Length coupling housing
LGH = Length gearhead
MAK = Motor adapter
MF = Motor flange

(see page 257 for LCH dimensions)

¹ When ordering with actuator, use order code ^⑨ (see Ordering Information) to specify mounted gearhead size, ratio and orientation:
Gearhead size example: **F** = PS60 **G** = PS90 **H** = PS115 **J** = PV040TA **K** = PV60TA **L** = PV090TA **M** = PV115TA
Gearhead ratio and mounting orientation: (Replace "x" to specify)
1 = ratio 3:1 **2** = ratio 5:1 **3** = ratio 10:1
* 3:1 ratio not available on "J" PV040TA gearhead

² Use order code ^⑩ (see Ordering Information) to specify appropriately sized motor mounting kit.

	Mx	AP	90	M6x1	115	70	10	19	40	110	35	40

¹ When ordering with actuator, use order code ^⑨ (see Ordering Information) to specify mounted gearhead size, ratio and orientation:
 Gearhead size example: **F** = PS60 **G** = PS90 **H** = PS115 **J** = PV040TA **K** = PV60TA **L** = PV090TA **M** = PV115TA

Gearhead ratio and mounting orientation: (Replace "x" to specify)

1 = ratio 3:1 **2** = ratio 5:1 **3** = ratio 10:1

^{*} 3:1 ratio not available on "J" PV040TA gearhead

² Use order code ^⑩ (see Ordering Information) to specify appropriately sized motor mounting kit.

Motor Mounting Kit Options

Motor Mounting Kits include a coupling housing, coupling, and flange.

A = Bolt circle diameter
B = Screw for bolt circle
C = Square dimension
D = Pilot diameter
E = Pilot depth
F = Input drive shaft diameter
G = Input drive shaft length
LCH = Length coupling housing
MF = Motor flange

¹ When ordering with actuator, use order code ⑨ (see Ordering Information) to specify mounted gearhead size, ratio and orientation:
 Gearhead size example: **F** = PS60 **G** = PS90 **H** = PS115 **J** = PV040TA **K** = PV60TA **L** = PV090TA **M** = PV115TA
 Gearhead ratio and mounting orientation: (Replace "x" to specify)
1 = ratio 3:1 **2** = ratio 5:1 **3** = ratio 10:1
 * 3:1 ratio not available on "J" PV040TA gearhead

² Use order code ⑩ (see Ordering Information) to specify appropriately sized motor mounting kit.

Belt Driven
Tables

Limit & Home Sensors

The HMR uses Parker's Global Sensor line, which can be mounted in the longitudinal t-slots running along the actuator body. These sensors mount flush to the extrusion body, minimizing the overall width of the actuator.

Parker's Global Sensors feature short circuit protection, power up pulse protection, and reverse polarity protection.

The sensor cable can be concealed under the yellow T-slot covers which are provided with each unit.

For internally configured sensors, the cables are routed internally and exit and the end cap of the unit through industrially hardened M8 connectors.

In the event internal sensors are configured, they cannot be re-positioned in the field. The pre-set location is configured in the part number model code. Please consult factory for further assistance.

Permanent magnets integrated into the carriage assembly actuate the sensors as the carriage traverses it linear travel.

All actuators pre-configured with a sensor pack, come pre-configured with a 5 meter extension cable, with flying leads.

Common Specifications:

Electric current drain: 100 mA (max)

Switching current: 10 mA (max)

Supply voltage: 10 – 30 VDC

Switching Frequency: 1 kHz

Magnetic LED Cylinder Sensors

Shock Absorbing Bumper

HMR actuators come factory installed with impact protection bumpers. These carriage mounted bumpers can compensate the energy released by unintentional impact and afford some protection against mechanical damage.

Two bumpers (four total) are fitted to each side of the carriage.

Shock absorbers for impact protection

Product size		HMRx08	HMRx11	HMRx15	HMRx18	HMRx24
Shock absorber		TA12-5	TA12-5	TA12-5	TA17-7	TA17-7

Distance-force and energy-distance characteristic curve (dynamic) – frame sizes HMRx18, HMRx24

Dowel Sleeves

Dowel sleeves can be used to provide pinning functionality between the carriage mounting surface and the payload. These sleeves have a tightly toleranced outer diameter to accurately locate between the bore in the carriage and the end effector, but have a hollow center granting access to the threaded hole in the carriage underneath the pin bore. This means that these dowel pin bore can additionally function as a threaded connection to the carriage. See Dimensions for carriage mounting detail.

7mm Outer Diameter Dowel Sleeve

OSPE..BHD Belt-Driven Actuators

High-Speed, Long Travel, Heavy Duty Applications

- High dynamic for precision positioning
- High thrust capacity
- High payload capacity
- High speed operation
- Easy installation
- Ideal in multi axis applications

Features

- Integrated ball bearing guide or roller guide
- Clamp drive shaft design for compact and backlash free gearhead and motor mounting
- Tandem carriage with second carriage for higher load capabilities
- Long available strokes
- Complete motor and drive packages
- Bi-parting carriages and special options on request
- Ambient temperature range -30°C to +80°C
- IP 54 Rating

OSPE20BHD

OSPE25BHD

OSPE32BHD

OSPE50BHD

	OSPE20BHD	OSPE25BHD	OSPE32BHD	OSPE50BHD
Maximum Travel (mm)	5,760	5,700	5,600	5,500
Maximum Payload F_z (N)	1,600	3,000	10,000	15,000
Maximum Acceleration (m/sec ²)	50	50	50	50

The OSPE..BHD is the highest capacity belt-driven actuator in the OSPE family. The integrated ball bearing guide or optional roller guide are proven in thousands of industrial machines requiring

robustness, dynamic precision and extraordinary performance with an aesthetically pleasing design.

The compact design allows integration of the OSPE..BHD in any

machine layout, providing very little space, without sacrificing payload or thrust capacity.

- ① **Carriage**
Low profile, high strength aluminum carriage with threaded holes for ease of mounting
- ② **Belt tensioning station**
Easy access for belt tension without removing the payload
- ③ **Corrosion resistant steel sealing band**
Magnetically fastened to the actuator body and provides sealing to IP54
- ④ **Lubrication access port**
Easy access maintenance allows for single point lubrication of bearing trucks at any point along travel
- ⑤ **Slotted profile**
With dovetail grooves for strength, actuator mounting, and mounting of sensor and other accessories
- ⑥ **Integrated ball bearing truck**
For high performance, high payload and moment load demands. (Optional roller wheels available.)
- ⑦ **Steel reinforced timing belt**
High thrust force transmission and long life
- ⑧ **Clamp shaft**
Optimal, zero-backlash coupling for gearhead and motor
- ⑨ **End housing mounting**
Threaded mounting holes allow for a multitude of mounting options

Integrated Bearing Design

Ball bearing - with a high-precision, hardened-steel rail and calibrated bearing trucks for high load capabilities
 Roller bearing - with an aluminum grounded and calibrated steel track and needle bearing wheels for high-speed operation up to 10 m/s.

Drive Shaft Options

Clamp shaft (for zero-backlash coupling), plain shaft (for dual axis linking), clamp and plain shaft (for master unit to connect link shaft on plain shaft), and hollow shaft (for compact gearhead mounting)

Carriage Options

Standard carriage, tandem carriage — for higher load capabilities, or bi-parting carriage — for opposing synchronized movements

Actuator Mounting Options

End cap mounting — allows the actuator to be anchored by the end caps
 Profile mounts — support long travel actuators or for direct mounting

Multi-axis Systems

A wide range of adapter plates and intermediate drive shafts simplifies engineering and installation. Please consult factory for your individual system design.

Options and Accessories

Information on all OSPE..BHD Series options is detailed in Options & Accessories. Simply select all the options needed to solve your application requirements, then order with the actuator using convenient order codes (see Ordering Information). To order an option separately as an upgrade to an existing system or as a replacement part, use the individual option part numbers provided.

SPECIFICATIONS

SPECIFICATIONS

Parker Origa System Plus (OSPE) Series electric motor-driven actuator systems are field-proven worldwide. OSPE Actuator systems are completely modular to accommodate a broad range of application installation and performance requirements. Compact size, maximum configurability and the flexibility to select the right drive train technology for high speed and/ or precise positioning applications makes the OSPE easy to integrate into any machine layout simply and neatly.

⁽⁴⁾ Load and bending moment based on 8000 km performance

Available Thrust Force by Speed and Stroke

Calculating Load Factors - Combined Normal and Moment Load

The sum of combined loads (static and dynamic) must not exceed "1" at any time as shown in the formula below:

$$\frac{F_z}{F_z(\max)} + \frac{M_x}{M_x(\max)} + \frac{M_y}{M_y(\max)} + \frac{M_z}{M_z(\max)} \leq 1$$

$$M = F \times l \text{ (Nm)}$$

$$M_x = M_{x \text{ static}} + M_{x \text{ dynamic}}$$

$$M_y = M_{y \text{ static}} + M_{y \text{ dynamic}}$$

$$M_z = M_{z \text{ static}} + M_{z \text{ dynamic}}$$

Maximum Permissible Unsupported Length — Determining end cap and profile mounting placement

OSPE..BHD Series actuators need to be mounted onto a solid machine base or frame structure using appropriately positioned end cap and profile mounts. This ensures that the actuator will not undergo excessive deflection based on the application's load and length requirements.

The greater the load and/or the longer the unsupported length between mounts, the more the actuator is susceptible to deflection. Deflection is also dependent on the carriage orientation (F_z for top oriented carriage or F_y for a side mounted carriage).

To determine correct end cap and profile mount placement, please follow the steps shown in the example below.

Use the deflection graphs on the next page to insure that the load will not exceed the maximum allowed deflection.

Example:

A horizontal application uses an OSPE32BHD with a top oriented ball bearing carriage. The maximum load on the carriage is 30 kg and the order stroke is 2,400 mm (see previous section to calculate order stroke).

Therefore, the overall length of the actuator will be approximately 3,000 mm:

$$2,400 \text{ mm} + 2 \times \text{Dim "X"} (262 \text{ mm}) = 2,924 \text{ mm}$$

- 1) Use the F_z graph for a top loaded ball bearing carriage (shown at right)
- 2) Calculate the Load " F " in Newtons based on the 30 kg application load requirement:

$$30 \text{ kg} \times 9.81 \text{ kg/ms}^2 = 294.3 \text{ N}$$

- 3) Draw a line from 294.3 N on the Y-axis to the OSPE32BHD curve, then down to the X-axis.
- 4) The value of " k " is approximately 750 mm.
- 5) Since the overall length (3000 mm) is greater than this value " k ", the actuator will require additional fixture points— two end cap mounts and three sets of profile mounts — equally spaced to create a distance " k " of 750 mm in between.
- 6) Maximum deflection of the actuator with this mounting configuration will be less than 0.075 mm:

$$0.01\% \text{ of } 750 \text{ mm} = 0.075 \text{ mm}$$

Ball Bearing Carriage Load-Distance

To further reduce deflection:

If the application requires less deflection, then simply reduce the distance " k " appropriately. In this example, for instance, the application must not exceed 0.05 mm. Therefore, " k " must also be 500 mm.

To achieve this reduced maximum deflection, the actuator will require seven fixture points — two end cap mounts and five pairs of profile mounts — equally spaced with a distance " k " of 500 mm in between.

Maximum Permissible Unsupported Length***Determining end cap and profile mounting placement***

Use the appropriate deflection graph to ensure that the application load does not exceed the deflection curve. Supporting the actuator within the recommended maximum distance “k” will ensure that the installation will have a maximum deflection equal to 0.01% of distance “k.”

To further reduce deflection, simply reduce the distance between end cap and profile mounts as described in the example on the previous page.

Ball Bearing Carriage Load-Distance**Roller Bearing Carriage Load-Distance**

OSPE50BHD	92.5	158	18	70	M6x12	164	77.0	43.0	10.4	347

Order Stroke Dimensional Requirements

Actuator Size	KM _{min}	KM _{rec}
OSPE20BHD	180	220
OSPE25BHD	210	250
OSPE32BHD	250	300
OSPE50BHD	354	400

KM_{min} is the minimum distance between two carriages possible.

KM_{rec} is the recommended distance between two carriages for optimal performance.

Order Stroke Safety Distance:

The mechanical end position should not be used as a mechanical end stop, thus an additional **Safety Distance** at both ends of travel must be incorporated into the Order Stroke. The safety distance for servo-driven systems is equivalent to the travel distance per one revolution of the drive shaft. AC motor-driven systems with VFDs require a larger safety distance than servo systems. For further information and design assistance, please consult factory.

OPTIONS & ACCESSORIES

OSPE..BHD Belt-Driven Actuators Gearhead Mounting Kit Options

Gearhead Mounting Kits include a coupling housing and flange

A = Bolt circle diameter
B = Screw for bolt circle
C = Square dimension
D = Pilot diameter

¹ When ordering with actuator, use order code ⑥ (see Ordering Information), to specify mounted gearhead size, ratio and orientation:

Gearhead size: **K** = PV60TA **L** = PV90TA **M** = PV115TA

Gearhead ratio and mounting orientation: (Replace "x" to specify)

With mounting position opposite carriage: **1** = ratio 3:1 **2** = ratio 5:1 **3** = ratio 10:1

With mounting position same side as carriage: **4** = ratio 3:1 **5** = ratio 5:1 **6** = ratio 10:1

² Use order code ⑨ (see Ordering Information) to specify choice of mounted motor.

■ Blue order codes indicate rapid shipment availability

Parker Hannifin Corporation • Electromechanical & Drives Division • Irwin, Pennsylvania • 800-358-9070 • www.parker.com/emn

Mounted Gearhead with Motor Mounting Kit Options

Mounted Gearhead with Motor Mounting Kits include a coupling housing, flange and gearhead with coupler and flange

A = Bolt circle diameter
B = Screw for bolt circle
C = Square dimension
D = Pilot diameter
E = Pilot depth
F = Input drive shaft diameter
G = Input drive shaft length
LCH = Length coupling housing
LGH = Length gearhead
MAK = Motor adapter
MF = Mounting flange

¹ When ordering with actuator, use order code ⑥ (see Ordering Information), to specify mounted gearhead size, ratio and orientation:

Gearhead size: **J** = PV040TA **K** = PV60TA

Gearhead ratio and mounting orientation: (Replace "x" to specify)

With mounting position opposite carriage: **1** = ratio 3:1

2 = ratio 5:1

3 = ratio 10:1

With mounting position same side as carriage: **4** = ratio 3:1

5 = ratio 5:1

6 = ratio 10:1

* 3:1 ratio not available on size OSPE20BHD (with "J" PV040TA gearhead)

² Use order code ⑨ (see Ordering Information), to specify appropriately sized motor mounting kit. See ordering information.

ORDERING INFORMATION

OSPE

Select an order code from each of the numbered fields to create a complete OSPE..BHD model order number. Include hyphens and non-selective characters as shown in example below.

	①	②	③	④	⑤	⑥	⑦	⑧	⑨	⑩	⑪	⑫			
Order Number Example:	OSPE	25	–	6	0	0	02	–	00000	–	P	00	0	0	0

① Series

OSPE Origa System Plus Electromechanical

② Actuator Bore Size

20 73 mm W x 49 mm H
25 93 mm W x 53 mm H
32 116 mm W x 67 mm H
50 175 mm W x 93 mm H

③ Drive Train

5 Belt actuator with integrated roller guide
 (Available upon request — consult factory)
6 Belt actuator with integrated ball bearing guide

④ Carriage

0 Standard
1 Tandem (two carriages for higher load capabilities)
2 Bi-Parting (two driven carriages with opposing movements)

⑤ Operating Direction and Magnet Position*

(See blue inset box (next page) for parallel actuators operating direction)

- 0**  Standard (Carriage moves away from drive end)
- 1**  Standard (Carriage moves toward drive end)
- 0**  Tandem (Carriage moves away from drive end)
- 1**  Tandem (Carriage moves toward drive end)

OSPE..B Belt-Driven Actuators

Actuators for Point-to-Point Applications

- Precise path and position control
- High-speed operation
- Easy installation
- Low maintenance
- Ideal for precise point-to-point applications

Belt Driven
Tables

Features

- Integrated drive and guidance system
- Tandem carriage with second carriage for increased load capabilities
- Long available strokes
- Complete motor, gearhead and control packages
- Diverse range of accessories and mountings
- Bi-parting carriages and special options available
- Ambient temperature range -30°C to +80°C
- IP 54 rated

PowerSlide

- Designed for harsh environments
- Speed up to 3 m/s
- Hardened steel guide rail
- Carriage with steel v-wheels
- Tough roller cover with wiper and grease access point

ProLine

- Designed for high-speed, precise, smooth and quiet operation
- Aluminum rail with ground and calibrated steel trucks
- Carriage supported by needle bearing rolls
- Integrated wipers to keep bearing system clean
- Lifetime lubricated bearing system

OSPE25BHD

OSPE32BHD

OSPE50BHD

	OSPE25BHD	OSPE32BHD	OSPE50BHD
Maximum Travel (mm)	3,000	5,000	5,000
Maximum Payload F_z (N)	160	300	850
Maximum Acceleration (m/sec ²)	10	10	10

The field-proven OSPE..B design is the industry standard for the widest array of point-to-point linear traverse applications. Compact size and maximum configurability make the OSPE..B easy to

integrate into any machine layout simply and neatly.

To meet rigorous environmental and maximum performance criteria, the OSPE..B Series is optionally available with

the PowerSlide and ProLine external bearing which can be installed in any position (top, side or bottom of the actuator) and retrofitted to existing actuators.

Parker Hannifin Corporation • Electromechanical & Drives Division • Irwin, Pennsylvania • 800-358-9070 • www.parker.com/emn

- ① Drive shaft**
Designed to pair with a large assortment of motor and gearhead mounting options
- ② Double row angular contact ball bearing**
Optimized for high thrust force transmission
- ③ Corrosion resistant steel sealing band**
Magnetically fastened to the actuator body and provides sealing to IP54
- ④ Carriage**
Low profile, high strength aluminum carriage with threaded holes for ease of mounting
- ⑤ Low friction support rings**
Polymer glider bushing to provide an economical guidance system with optimum performance
- ⑥ Slotted profile**
With dovetail grooves for strength, actuator mounting, and mounting of sensor and other accessories
- ⑦ Steel reinforced toothed belt**
Moderate force transmission and long life
- ⑧ End housing mounting**
Threaded mounting holes allow for a multitude of mounting options

Carriage Bearing Design Configurations

Standard carriage — with internal glider bearing
 PowerSlide — externally mounted steel roller guide for higher load capabilities specifically in harsh environments
 ProLine — externally mounted aluminum roller guide for higher load capabilities in high speed applications

Optional Carriage Orientation

(for standard carriage only)
 Tandem carriage (for higher load capabilities), bi-parting carriage (for opposing synchronized movements), clevis mounting (provides compensation between actuator and guide rails in machine designs), Inversion mounting (allows outer band to be on the bottom, while keeping payload on top, for better actuator protection in dirty environments)

Actuator Mounting Options

End cap mounting — allows the actuator to be anchored by the end caps
 Profile mounting — supports long travel actuators or for direct mounting

Multi-axis Systems

A wide range of adapter plates and intermediate drive shafts simplifies engineering and installation. Please consult factory for your individual system design.

Drive Shaft Options

Plain drive shaft left, plain drive shaft right, or double plain drive shaft to connect master unit with idler unit

Options and Accessories

Information on all OSPE..B Series options are detailed in Options & Accessories. Simply select all the options needed to solve your application requirements, then order with the actuator using convenient order codes (see Ordering Information). To order an option separately as an upgrade to an existing system or as a replacement part, use the individual option part numbers provided.

Calculating Load Factors - Combined Normal and Moment Load

The sum of combined loads (static and dynamic) must not exceed "1" at any time as shown in the formula below:

$$\frac{F_z}{F_z(\max)} + \frac{M_x}{M_x(\max)} + \frac{M_y}{M_y(\max)} + \frac{M_z}{M_z(\max)} \leq 1$$

$$\begin{aligned}
 M &= F \times l \text{ (Nm)} \\
 M_x &= M_{x \text{ static}} + M_{x \text{ dynamic}} \\
 M_y &= M_{y \text{ static}} + M_{y \text{ dynamic}} \\
 M_z &= M_{z \text{ static}} + M_{z \text{ dynamic}}
 \end{aligned}$$

¹ PowerSlide or ProLine guide bearings can be ordered individually with assigned part number in the table and specified, five digit order stroke value (mm), following the part number (-nnnnn) to designate the appropriate length guide rail. To order PowerSlide or Proline bearing with the actuator, use the appropriate order in item ⑩

² Longer strokes available upon request. Contact factory.

³ Load and moment based on 8000 km performance Refer to "Calculating Load Factors" for additional information.

⁴ For tandem and bi-parting options, double the values listed.

Maximum Permissible Unsupported Length — Determining end cap and profile mounting placement

OSPE..B Series actuators need to be mounted onto a solid machine base or frame structure using appropriately positioned end cap and profile mounts. This ensures that the actuator will not undergo excessive deflection based on the application's load and length requirements.

The greater the load and/or the longer the length between mounts, the more the actuator is susceptible to deflection. Deflection is also dependent on the carriage orientation (F_z for top oriented carriage or F_y for a side mounted carriage).

Standard Carriage, Tandem Carriage, PowerSlide or ProLine

To determine correct end cap and profile mount placement, please follow the steps shown in the example below.

Bi-Parting Carriage

Use the deflection graphs (next page), to ensure that the load will not exceed the maximum allowed deflection.

Example:

A horizontal application uses an OSPE32B with a top oriented carriage. The maximum load to the carriage is 10 kg and the order stroke is 3,700 mm (see Dimensions to calculate order stroke).

Therefore, the overall length of the actuator will be 4,000 mm:

$$3,700 \text{ mm} + 2 \times \text{Dim "X"} (150 \text{ mm}) = 4,000 \text{ mm}$$

- 1) Use the appropriate F_z graph (next page) for a top loaded carriage. (Note: with the standard carriage, top loaded F_z and side loaded F_y values are the same).
- 2) Calculate the Load " F " in Newtons based on the 10 kg application load requirement:

$$10 \text{ kg} \times 9.81 \text{ kg/ms}^2 = 98.1 \text{ N}$$

- 3) Draw a line from 98 N on the Y-axis to the OSPE32B curve, then down to the X-axis.
- 4) The value of " k " is approximately 3,600 mm.
- 5) Since the overall length (4,000 mm) is greater than this value " k ", the actuator will require an additional third fixture point — two end cap mounts and one profile mount — equally spaced to create a distance " k " of 2000 mm in between.
- 6) Maximum deflection of the actuator with this mounting configuration will be less than 4 mm:

$$0.2\% \text{ of } 2,000 \text{ mm} = 4 \text{ mm}$$

Standard Carriage Load-Distance

To further reduce deflection:

If the application requires less deflection, then simply reduce the distance " k " appropriately. In this example, for instance, the application must not exceed 2 mm (1/2 the maximum deflection calculated). Therefore, " k " must also be 1/2, or 1000 mm.

To achieve this reduced maximum deflection, the actuator will require five fixture points — two end cap mounts and three profile mounts — equally spaced with a distance " k " of 1000 mm in between.

Standard Carriage Load-Distance

Maximum Permissible Unsupported Length

Determining end cap and profile mounting placement

Use the appropriate deflection graph to ensure that the application load does not exceed the deflection curve. Supporting the actuator within the recommended maximum distance "k" will ensure that the installation will have a maximum deflection equal to 0.2% of distance "k."

To further reduce deflection, simply reduce the distance between end cap and profile mounts as described in the example on the previous page.

PowerSlide Carriage Load-Distance

ProLine Carriage Load-Distance

OSPE50B	36	110	27	M6 x 10	87	92.5	70	M6 x 12	76	77	43.0	10.4	200

Order Stroke Dimensional Requirements

Actuator Size	KM _{min}	KM _{rec}
OSPE25B	130	190
OSPE32B	170	230
OSPE50B	220	320

KM_{min} is the minimum distance between two carriages possible; KM_{rec} is the recommended distance for optimal performance.

Order Stroke Safety Distance:

The mechanical end position should not be used as a mechanical end stop, thus an additional **Safety Distance** at both ends of travel must be incorporated into the Order Stroke. The safety distance for servo-driven systems is equivalent to the travel distance per revolution of the drive shaft. AC motor-driven systems with VFD require a larger safety distance than servo systems. For further information and design assistance, please consult factory.

R Clevis Mounting Option for Standard Carriage

The aluminum clevis mount option bolts directly to the standard carriage to eliminate parallelism deviations and strain to the carriage when the actuator is mounted onto machine guide rails. Clevis mounting provides compensation for misalignment in Z and Y directions and can tilt around the X and Y axis.

When external guides are involved in the application, slight parallelism deviations can lead to mechanical strain on the carriage and actuator. This can be avoided by the use of a clevis mount that provides freedom of movement compensation on several axes.

M Inversion Mounting Option for Standard Carriage

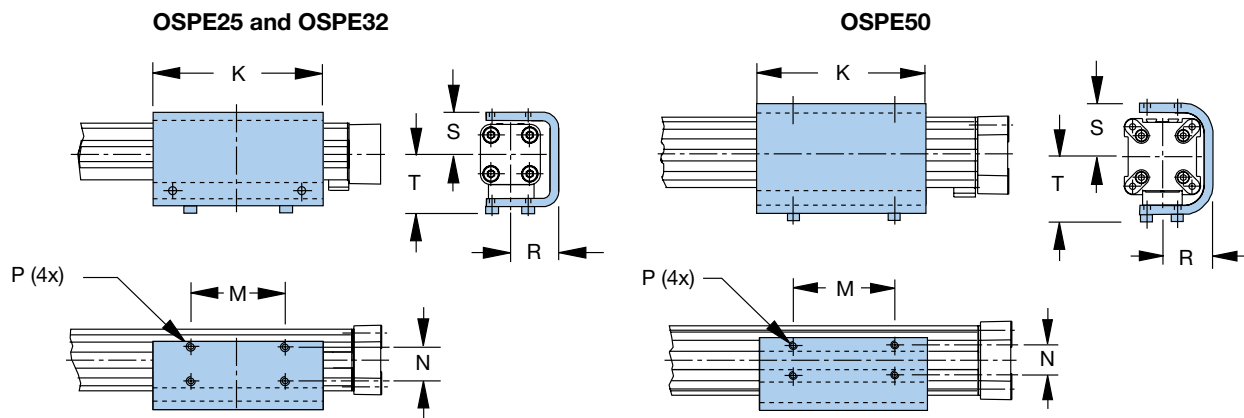

For dirty environments or space-restricted installations, inversion of the actuator is recommended.

The aluminum inversion bracket transfers the driving force to the opposite side of the actuator

allowing the load to be attached to the top side of the actuator while the carriage and sealing band remain protected on the bottom side. The size and position of the mounting holes are the same as on the standard carriage.

Note: Profile mounts and magnetic switches can only be used on the free side of the actuator.

Gearhead Mounting Kit Options

Gearhead Mounting Kits include a coupling housing, coupling and flange

A = Bolt circle diameter
B = Screw for bolt circle
C = Square dimension
D = Pilot diameter
E = Pilot depth
F = Input drive shaft diameter
G = Input drive shaft length
LCH = Length coupling housing
MF = Motor flange

OSPE..BV Fixed Belt-Driven Actuators

Actuators with Fixed Belt for Vertical Applications

- Fixed actuator head for low moving mass
- Integrated ball bearing guide for high bending moments
- Magnetic switch set for contactless position sensing
- Easy to install
- Low maintenance

Features

- High acceleration and speeds
- Drive Shaft versions with clamp shaft or plain shaft
- Power transmission by belt
- Moving axis profile
- Complete motor and control packages
- IP 20 rating

OSPE20BHD

OSPE25BHD

	OSPE20BV	OSPE25BV
Maximum Travel (mm)	1,000	1,500
Maximum Payload F_z (N)	1,600	3,000
Maximum Acceleration (m/sec ²)	20	20

The OSPE..BV vertical fixed belt-driven actuator with integrated ball bearing guide is designed specifically for lifting loads in vertical orientation. The light weight design allows to use smaller motors with this actuator keeping the robust and aesthetically pleasing design of the OSPE series.

The compact and modular design allows the integration of the OSPE..BV in any machine layout, providing very little space, without sacrificing payload or thrust capacity.

- ① **Carriage**
Low profile, high strength aluminum carriage with threaded holes for ease of mounting
- ② **Belt tensioning station**
Easy access for belt tension without removing the payload
- ③ **Corrosion resistant steel sealing band**
Magnetically fastened to the actuator body and provides sealing to IP54
- ④ **Lubrication access port**
Easy access maintenance allows for single point lubrication of bearing trucks at any point along travel
- ⑤ **Slotted profile**
With dovetail grooves for strength, actuator mounting, and mounting of sensor and other accessories
- ⑥ **Integrated ball bearing truck**
For high performance, high payload and moment load demands. (Optional roller wheels available.)
- ⑦ **Steel reinforced timing belt**
High thrust force transmission and long life
- ⑧ **Clamp shaft**
Optimal, zero-backlash coupling for gearhead and motor
- ⑨ **End housing mounting**
Threaded mounting holes allow for a multitude of mounting options

Drive Shaft Options

- Drive shaft with clamp shaft
- Drive shaft with both clamp and plain shaft
- Drive shaft with plain shaft
- Drive shaft with double plain shaft for parallel operation of two Z-axes with an intermediate drive shaft

Actuator Head Orientation

All OSPE..BV actuator heads are standard with an integrated ball bearing guide and are available with either left or right side gearhead/motor mounting.

Drive Head Options

Standard or tandem with additional actuator head and two additional carriers for higher bending moments.

Multi-axis Systems

A wide range of adapter plates and intermediate drive shafts simplifies engineering and installation. Please consult factory for your individual system design.

Magnetic Switches Set

Magnetic switches with connector, mounting rail and magnets for contactless sensing of the end positions. Cable (suitable for cable chain) can be ordered separately in 5 m, 10 m or 15 m length.

Options and Accessories

Information on all OSPE..BV Series options is detailed in Options & Accessories. Simply select all the options needed to solve your application requirements, then order with the actuator using convenient order codes (see Ordering Information). To order an option separately as an upgrade to an existing system or as a replacement part, use the individual option part numbers provided.

DIMENSIONS

OSPE..BV Order Stroke Dimensions

Standard Drive Head

Actuator Size	OSPE20BV	OSPE25BV
A	148	210
KM _{min}	155	225
KM _{rec}	225	275

KM_{min} is the minimum distance between two drive heads possible.
 KM_{rec} is the recommended distance between two drive heads for optimal performance.

Tandem Drive Head

Magnetic Switch Dimensions

The magnetic switch set provides contactless sensing of the end positions. The mounting rail and magnetic switches are mounted on the actuator drive head and the magnets are mounted in the dovetail slot on the profile.

**Dimension (mm)**

	OSPE20BV	OSPE25BV
MA	46.0	56.0
MB	23.7	26.0
MC	42.3	51.0

Order Stroke Safety Distance:

The mechanical end position should not be used as a mechanical end stop, thus an additional Safety Distance at both ends of travel must be incorporated into the Order Stroke.

The safety distance for servo-driven systems is equivalent to the travel distance per one revolution of the drive shaft.

AC motor-driven systems with VFDs require a larger safety distance than servo systems. For further information and design assistance, please consult factory.

Base Unit Dimensions

Drive Shaft Versions:

ORDERING INFORMATION

OSPE..BV

ORDERING INFORMATION

Select an order code from each of the numbered fields to create a complete OSPE..BV model order number. Include hyphens and non-selective characters as shown in example below.

	①	②	③	④		⑤	⑥	⑦	⑧			⑨			
Order Number Example:	OSPE	20	–	7	0	0	02	–	00000	–	P	00	0	0	0

① Series

OSPE Origa System Plus Electromechanical

② Bore Size

20 73 mm W x 123.3 mm H

25 93 mm W x 154.5 mm H

③ Drive Train

7 Vertical Fixed Belt-Driven Actuator w/Integrated Ball Bearing Guide

④ Carriage

0 Standard

1 Tandem (two drive heads for higher actuator stiffness)

⑤ Drive Shaft Configuration and Orientation ⁽¹⁾

02  Clamp shaft* (left)

04  Clamp shaft* (right)

03  Clamp shaft* (left) with plain shaft for use with intermediate drive shaft for parallel actuator system

05  Clamp shaft* (right) with plain shaft for use with intermediate drive shaft for parallel actuator system

0A  Plain shaft idler unit** (left) for parallel actuator system

0B  Plain shaft idler unit** (right) for parallel actuator system

* Consult factory for all gearhead and motor mounting options

** Only available with order code 00 "No gearhead mounting kit or motor option" (item ⑧)

⑥ Order Stroke*

00000 5-digit input (in mm)*

* Maximum standard stroke: OSPE20BV = 1000 mm; OSPE25BV = 1500 mm. For example, to OSPE..V with maximum order stroke, specify 01500. Longer strokes available upon request. Consult factory.

⑦ Hardware and Cover Strip

P Standard hardware with Parker gold cover strip

⑧ Gearhead/Motor Mounting Options

00 No gearhead mounting kit or motor option

xx Consult factory for all gGearhead and motor mounting options

⑨ Magnetic Sensor Mounting

0 No sensor mounting

B 2 pc. N.C., NPN, with M8 connector

E 2 pc. N.C., PNP, with M8 connector

* Extension cable with M8 plug and 5 m cable flying lead cable for Sensor with M8 connector can be ordered separately; use part number 003-2918-01

⁽¹⁾ Drive Shaft Orientation

Drive shaft orientation is determined by viewing the actuator facing the drive head with the belt tensioning end facing up and the end cap for mounting the load facing down.

Note:

Special drive shafts are available – consult factory.

The LCR Series

Miniature Belt-Driven
Designs with Maximum
Versatility

- Miniature footprint – 30 x 40 mm cross-section
- Internal square rail or glider bearing design
- 100% duty cycle
- IP30 stainless steel strip seal
- Low noise 2 and 10 mm leadscrew or long travel belt drive
- Travel lengths to 1000 mm
- Attractive black anodize finish

Features

- Extruded aluminum body incorporates dovetail mounting, T-slots and belt return
- Toe clamp mounting for easy installation
- Dowel pin holes in the LCR30 carriage for repeatable mounting
- Multiple motor mount options accommodate NEMA 11,17 and 23 steppers and NEMA 16 servo motors
- Flush-mounted NPN, PNP, N.O. or N.C. fully adjustable limit sensors maximize flexibility and minimize footprint impact
- Screw-driven version has an optional parallel motor mount for space constrained applications

Belt Driven
Tables

LCR30

Maximum Travel (mm)	600
Maximum Payload (N)	500
Maximum Acceleration (m/s ²)	20

*Do not exceed allowable axial and moment loading.

LCR30

For OEMs looking to automate light payloads, the new LCR (Light Capacity Rodless) linear positioner family provides the smallest form factor with unmatched, easy-to-use flexibility.

With any “build-it-yourself” positioner, all the parts required to build a linear motion axis from scratch must be ordered, tracked, received, inventoried, assembled and tested. In contrast, the LCR Series is a completely pre-engineered, pre-tested, ready-to-use positioner solution,

which allows OEMs to significantly reduce their time to market with minimized design, procurement, manufacturing, assembly and qualification time or effort.

Based on the proven life science track record of Parker’s MX80 and LP28 Series, the LCR was developed specifically to provide a high-quality, easy-to-use, off-the-shelf linear actuator.

LCR solutions are ideal for Maldi-plate and micro-titer tray automation. Rated for 100%

duty cycle, the LCR offers smooth, quiet motion ideal for keeping instrument noise to a minimum. With selectable travel lengths up to 1000 mm and payloads up to 100 N (25 lbs), the ability to automate laboratory instruments has never been easier.

Bottom Line Impact

The LCR’s proven pre-engineered design will significantly reduce your instrument time to market and improve your ROI.

Tailored to Meet Every Requirement

The LCR is an easy-to-configure off-the-shelf solution with a virtually unlimited array of standard configurations available.

If your application demands a special design, Parker takes the next step and customizes the product to meet your required specification. Common modifications include:

- Clean room components
- Special tool plates
- Mounts for 3rd party motors
- Single or parallel acting electric grippers
- Maximum height or length modifications for space constraints
- And much more

Whether you need blue anodize or a design with a custom carriage for larger than standard payloads, or anything else, Parker excels at application solutions and will modify the LCR to fit your specific needs.

Please call us at 800-245-6903 to discuss your requirements.

Ideal for High-Volume, Light-Capacity, Electrically-Controlled Motion

Life science applications:

- Mass spectroscopy
- Course microscopy
- Analytical instruments
- Laboratory automation
- Micro titer automation
- MALDI plate automation
- Liquid handling
- Syringe pumps

General-purpose applications:

- Point-of-purchase kiosks
- Adjustable guide widths for conveyor lines
- Storage and retrieval
- Part shuttling
- Light payload automation conversion from rodless pneumatics to electric
- General automation for any ≤ 25 lb payload with basic repeatability requirements

All LCR series actuators are compliant to RoHS and CE directives.

- ① **Motor Mounting Options**
The most motor mounting options standard with more options easily available
- ② **Encoder options**
For position verification and position maintenance
- ③ **Carriage mounting surface**
Machined aluminum carriage mounting surface with locating holes
- ④ **Stainless steel sealing strip**
Best in class bearing and drive train protection
- ⑤ **Easily adjustable belt tension system**
Reduces maintainance and down time
- ⑥ **Minimal instrument/machine size**
Including flush mount limit sensors
- ⑦ **Profile size**
Provides high rigidity for minimal deflection along with "T" and dovetail slots

Flexible drive train options
With multiple screw leads for high thrust or reinforced belt drive for highest speeds

Parallel motor mounts available

Stepper drive option

Simple and powerful plug and spin P2™ stepper drive option

Rugged internal square rail

Re-circulating bearing or quiet glider bearing for lighter payload needs

Quick and easy mounting options

With toe clamps or standard multi-axis connection kits

Metric and Imperial graduated scales

integral to the LCR body frame are among the many custom modifications available.

The P2™ Drive

An OEM-Friendly Design...

The P2 Completes the LCR as an Easy-to-Use Motion Solution

Pairing the LCR with the P2™ drive, instrument builders eliminate another costly design component and complete their motion package with a single-vendor, easy-to-use solution.

The P2 drive is only 1" x 1" x 3" in size, but packs 2 A of current at 24 VDC to provide superior power density for simple step and direction motion.

The Parker P2 Stepper Drive is a complete step and direction indexer for hybrid step motors. The P2 drive operates stepper motors in full, half, quarter, and sixteenth step modes with an output drive capacity up to 24 VDC and 2.0 amps.

Key Design Advantages

- On board eyelets allow OEMs to measure output current and to set all drives equally
- Two potentiometers allow for easy adjustment of standby and run current
- No programming
- No code to learn
- Robust, high quality product with 100% pre-ship testing

Key Design Features

- Supply voltage 12 to 24 VDC
- 2.0 amps max motor output current
- Adjustable run current and standby current
- Single or differential ended inputs
- Enable, step and direction inputs voltages up to ± 14 VDC (low/high input): < 0.8 V Low, > 2 V High
- 1.0 μ s minimum step pulse width
- 1.0 μ s minimum step pulse low time
- 0 to 40°C operating temperature with natural convection
- 5 to 95% relative humidity, non-condensing
- Optional DIN rail mount
- Resolutions of 200, 400, 800 and 3200 steps/rev (with 1.8° step motor)
- Small package (80 mm x 25 mm x 25 mm)
- RoHS compliant

P2 saves a lot more than space...

The P2 Series offers added value to customers who traditionally specify board level drives or design their own drives in house.

① Free-up engineering, procurement, quality, and assembly resources in house. The P2 Series reduces the instrument/machine design time by utilizing an off-the-shelf solution.

The result: faster time to market for new products, allowing customers to focus on core competency.

② The P2 also reduces procurement complexity by reducing the need to chase multiple vendors versus a do-it-yourself drive design.

The result: better return on investment.

③ The P2 Series provides the customer added flexibility to mount the enclosed, protected drive directly onto a motion axis such as the Parker LCR Series, or DIN rail mount in a convenient location.

The result: a well protected, robust drive with quick and easy installation for an easy out-of-box user experience.

LCR Series Performance Specifications

Addressing applications which involve positioning of smaller payloads within a very small space envelope, the LCR30 is the ideal solution for OEM instrument manufacturers. The LCR30 offers a reduced overall cost of ownership and a complete solution including amplifier/drive, motor, actuator, bearings, seals, and limit sensors.

Belt Driven
Tables

LCR Belt-Driven Performance by Profile Size

Specification	Units	LCR30	
Grade		S (Square Rail)	B (Bushing)

End-of-Travel Limit Sensors

Limit sensors offer home and end of travel protection in a flush mount design that minimizes the overall width of the LCR series. The limit sensors are available standard as NPN or PNP with normally open or normally closed designs.

Specifications

Operating Voltage: 10-30 VDC
Repeatability: $\leq \pm 0.1$ mm
EMC: EN 60 947-5-2
Short circuit protections: Yes
Reverse Polarity Protection: Yes
Enclosure Rating: IP 67
Operating Temperature Range: -25° to 75° C (-13° to 167° F)

Wiring Connection

HPLA Series Belt Driven Linear Modules

Belt-Drive Actuators for High Thrust, Long Stroke Applications

- Strong – steel roller bearing option for highest load capacity – 1530 kg
- Rugged construction for heavy duty applications
- Thrust force capacity to 5455 N
- Standard travel up to 9 meters
- Velocity up to 5 meters/sec.
- Positional repeatability of ± 0.2 mm
- Timing belt and pulley drive mechanism for fast, accurate positioning

Belt Driven
Tables

Proven Technology

- Direct mounting for planetary gear reducers – eliminating complexity of additional machined parts or couplings
- Adjustable “end of travel” limit switches and “Home” position sensor
- Cable carrier systems
- Performance matched Parker servo systems
- Structural components for vertical and multi-axis mounting
- Toe clamps and hardware for fast/easy mounting
- External bumper option
- Link shafts and support bearing for dual unit axes
- Splice plates for extending travels beyond length available in a single profile

	HLE60	HPLA80	HLE100	HPLA120	HLE150	HPLA180
Maximum Travel (mm)	4,000	5,540	6,200	9,470	7,900	9,240
Maximum Payload (N)	353	1,304	1,549	2,598	3,402	4,501
Maximum Acceleration (m/s²)	10	10	10	10	10	10

*Do not exceed allowable axial and moment loading.

The HPLA is a rugged “next generation” linear module that offers high speed, high acceleration, and long travel, combined with stiff, rigid construction characteristics. It is ideally suited as a single axis product or as a component for high speed multi-axis gantries.

The HPLA carriage is rigidly supported on three sides by heavy duty roller bearings, housed in a

rugged aluminum housing. The bearing wheels are pre-loaded via eccentric bushings to eliminate play in the system, and are strategically located to evenly distribute the load across the length of the carriage.

A high strength steel reinforced drive belt and pulley system provides fast and highly repeatable positioning of the carriage. This high thrust drive belt is securely connected to

the carriage by a unique clamping system. This system provides a secure connection and enables easy belt replacement without the need to remove the payload. Having a low coefficient of friction, the carriage design provides a high mechanical efficiency and long service life. Special carriage lengths and linear units with multiple carriages are available for custom applications.

① Carriage

Roller bearing wheels on three sides of the carriage provide smooth linear motion and support and evenly distribute the load across the length of the carriage. Eccentric bearing wheel bushings eliminate play on all sides of the carriage.

② Gearhead

Parker Stealth series gearheads integrated as direct drive options.

③ Drive Belt

A zero backlash, steel reinforced timing belt provides high speed, high force, and high acceleration. A serrated clamp mechanism between belt and carriage guarantees a safe, strong connection and allows belt replacement without removing the load.

④ Drive Station

The drive stations are designed to accept planetary gear reducers or provide different shaft outputs for driving the HPLA.

⑤ Housing

An extruded aluminum profile provides maximum rigidity (torsion and deflection) at minimum weight. It accommodates steel wheels that ride on integral hardened steel bearing ways, or polyamide wheels that ride in the extruded guideway.

⑥ Tensioning Station

An easily accessible tensioning station is used to set the drive belt tension.

⑦ Roller Bearing

Three rows of preloaded heavy duty steel roller bearings provide the highest load carrying capacity available.

Modular drive system

Increased system stiffness due to larger belt width. Low maintenance. High performance due to hollow shaft input.

Modular guide system

Provides an alternative to composite wheel material, with low maintenance and quiet operations. Steel wheel option on an integrated steel rolling surface for increased load capacity, plus high load-bearing capacity and high levels of rigidity.

Various options for adaptation to wide ranging applications

Steel cover strip, corrosion-resistant stainless steel version for application in clean rooms or in the food industry, and integrated position feedback system for maximum precision.

Optional IP30 Strip Seal

Magnetically attached stainless steel seal strip (not shown) provides environmental protection to interior components.

Roller Bearing Design

Each roller bearing incorporates a low friction, lubricated and sealed radial ball bearing enclosed in a hardened steel outer ring (or raceway). A polyamide tread can be substituted for the steel ring whenever whisper quiet motion is desired.

SPECIFICATIONS

SPECIFICATIONS

As part of the advanced, cost-effective construction of machines and handling systems, the HPLA is a good choice for applications such as materials handling (palletizing, depalletizing, feeding, and part removal), warehouse technology (parts picking, storage and retrieval), and machine tool automation (workpiece loading and unloading, tool changing). Additional examples include textile machinery building (cross-cutting, slitting and stacking, quilting, seam stitching) and construction (formwork and placing reinforcing steel bars in concrete).

Other typical applications are process engineering (painting, coating, bonding), testing technology (guiding ultrasonic sensors, laboratory equipment), and cleanroom technology (wafer transport, wafer coating).

(1) Includes weight of drive module.

(2) Greater speeds and accelerations may be achieved.

(3) Bumper to bumper maximum stroke - splicing possible for longer travel distances including safety zone.

(4) Nominal value - component dependent. For improved repeatability consult factory.

HPLA080 Series – Load-Bearing Capacity of Carriage and Timing Belt

Load-Bearing Capacity of HPLA080 Timing Belt (F_x)

The forces and moments that the carriage is capable of transferring are speed-dependent. The curves shown in the graphs apply to a standard carriage (S). With the extended carriage (E), all the values apart from F_x (load-bearing capacity of timing belt) can be doubled if the load is applied equally to both halves of the carriage or distributed uniformly along its entire length.

Description	Gearhead	Drive Option	Transferable Thrust Force (n)	
			Nominal Belt Tension (81,000 km life)	Maximum Belt Tension (46,000 km life)
Supported Pulley	PX90/PX115 PV90/PV115 PS90	S03/S04/ S08/S09	925	1115

HPLA080 Load-Bearing Capacity (F_y and F_z)

(Values double for extended carriage)

The curves show the maximum load-bearing capacity of a carriage in one direction of force or torque. If several loads are applied in different directions, the values given by the curves must be derated, i.e. the load or speed should be reduced if necessary.

HPLA080 Maximum Permissible Moment Load (M_x , M_y and M_z)

(Values double for extended carriage)

Virtual Engineer software is available for determination of precise carriage loading.

parker.com/VirtualEngineer

HPLA120 Series – Load-Bearing Capacity of Carriage and Timing Belt

Load-Bearing Capacity of HPLA120 Timing Belt (F_x)

Description	Gearhead	Drive Option	Transferable Thrust Force (n)	
			Nominal Belt Tension (81,000 km life)	Maximum Belt Tension (46,000 km life)
Supported Pulley	PV115 PX115 PS90/PS115	S03/S04/ S08/ S09	1700	2235

The forces and moments that the carriage is capable of transferring are speed-dependent.

The curves shown in the graphs apply to a standard carriage (S). With the extended carriage (E), all the values apart from F_x (load-bearing capacity of timing belt) can be doubled if the load is applied equally to both halves of the carriage or distributed uniformly along its entire length.

HPLA180 Series – Load-Bearing Capacity of Carriage and Timing Belt

Load-Bearing Capacity of HPLA180 Timing Belt (Fx)

Description	Gearhead	Drive Option	Transferable Thrust Force (n)	
			Nominal Belt Tension (81,000 km life)	Maximum Belt Tension (46,000 km life)
Supported Pulley	PS115 PS142	S03/S04/ S08/S09	4170	5455

The forces and moments that the carriage is capable of transferring are speed-dependent.

The curves shown in the graphs apply to a standard carriage (S). With the extended carriage (E), all the values apart from Fx (load-bearing capacity of timing belt) can be doubled if the load is applied equally to both halves of the carriage or distributed uniformly along its entire length.

HPLA180 Load-Bearing Capacity (Fy and Fz)

(Values double for extended carriage)

The curves show the maximum load-bearing capacity of a carriage in one direction of force or torque. If several loads are applied in different directions, the values given by the curves must be derated, i.e. the load or speed should be reduced if necessary.

HPLA180 Maximum Permissible Moment Load (Mx, My and Mz)

(Values double for extended carriage)

Virtual Engineer software is available for determination of precise carriage loading.

parker.com/VirtualEngineer

HPLA Characteristics

The HPLA deflection curves can be used for determining the deflection based on the profile length and the application load weight. Applications requiring high acceleration forces can place a severe strain on the system stability. In these cases, a solid substructure may be required with the HPLA product being supported at frequent intervals.

These deflection curves illustrate the deflection d , based on the HPLA profile being simply supported at both ends. The graphs take into consideration the self deflection due to the weight of the profile, along with the load to be transported. The maximum deflection cannot be exceeded. If the maximum deflection is exceeded based on your application parameters, then additional supports are required. Alternatively, the next larger profile size may be considered. For deflection formulas and calculations, please refer to the Technical Information Library found on our web site: www.parkermotion.com

Dual Axis Considerations

When two parallel linear modules are required to form a single axis, the span or distance between each unit determines which type of shaft connection is required. In some cases, a link shaft support bearing might also be required.

The link shaft bearing is used to support the linking shaft of an HPLA dual axis when there is a large center to center distance. This bearing must be used if the critical speed is exceeded with the dual-axis link shaft.

HLE-RB Series Belt Driven Linear Modules

Belt-Drive Actuators for High Thrust, Long Stroke Applications

- Standard travel up to 7.9 meters*
- Load Capacities up to 600 kg
- ± 0.2 mm positional repeatability
- Timing belt and pulley drive mechanism for fast, accurate positioning
- Roller wheel bearings for smooth high speed linear motion
- IP30 strip seal

*Longer travels available with splice kits.

Belt Driven
Tables

Design Advantages

- Low running friction
- Low particle generation (clean room suitability to class 100)
- Low wear and low maintenance
- Quiet operation
- High efficiency and long service life
- High dynamic performance due to low-mass, play-free wheels
- Minimal preventative maintenance required
- T-slots integrated on all sides of the profile for mounting attachments or for use as a cable duct
- Timing belts can be replaced without removing load attachment plate
- Multiple configuration options due to T-slots available on both the profile and load plate

	HLE60	HPLA80	HLE100	HPLA120	HLE150	HPLA180
Maximum Travel (mm)	4,000	5,540	6,200	9,470	7,900	9,240
Maximum Payload (N)	353	1,304	1,549	2,598	3,402	4,501
Maximum Acceleration (m/s²)	10	10	10	10	10	10

*Do not exceed allowable axial and moment loading.

The HLE-RB linear modules are ideal as single axis products or as components for high speed multi-axis gantries. With thousands of units in operation worldwide the HLEs are proven performers offering long life and trouble-free operation.

The HLE Linear Module consists of a lightweight carriage which can be precisely positioned within an extruded aluminum housing by a timing belt and pulley drive

system. The housing, constructed from extruded aluminum with a square cross sectional geometry, demonstrates excellent deflection characteristics.

The protective anolite coating provides durability as well as an attractive silver appearance. It includes T-slots along its entire length for flexible mounting. The drive mechanism is a zero backlash steel reinforced timing belt. The tension station, conveniently

located at the end of the unit provides for quick and easy belt adjustment. The drive station is designed to accept planetary gear reducers as well as a wide variety of servo and stepper motors. The bearing system for the RB models is comprised of three rows of roller wheels integral to the carriage which are guided by extruded tracks within the housing.

① Carriage

Roller bearing wheels are installed on three sides of the carriage to provide smooth linear motion and support. The wheels are positioned to evenly distribute the load across the length of the carriage. Eccentric bearing wheel bushings are adjusted to eliminate play on all sides of the carriage. Due to a low coefficient of friction, the carriage design provides a high mechanical efficiency and long service life. The carriages are available in standard and extended lengths. Special carriage lengths and linear units with multiple carriages are available for custom applications.

② Load Attachment Plate

Load attachment plates are available for every type of carriage. With integral T-slots or tapped with holes in a standard mounting pattern, they allow easy mounting of your load to the carriage of the HLE. Multiple HLEs can easily be mounted together by using standard clamping profiles. Tripping plates are mounted to the side of the load attachment plate to activate home or end of travel switches mounted to the side of the HLE. For special applications, the load plates can be designed to customer specified requirements.

③ Drive Belt

A zero backlash, steel reinforced timing belt provides high speed, high acceleration and good bidirectional repeatability.

④ Drive Station

Rigid cast housing with standard flanges for a variety of gearboxes. The drive stations are designed to accept planetary and worm gear reducers or provide different shaft outputs for driving the HLE.

⑤ Housing

Lightweight and self-supporting aluminum profiles are offered in three sizes:

HLE60: 60 x 60 mm
HLE100: 100 x 100 mm
HLE150: 150 x 150 mm

T-slots are provided for mounting the linear unit itself, applying additional components and accessories, or combining multiple HLEs. T-slots with plastic covers provide a simple cable conduit.

⑥ Tensioning Station

"Easy access" tensioning bolts allow external adjustment of belt tension.

⑦ Roller Bearing

Each wheel consists of a lubricated and sealed radial ball bearing to reduce friction and maintenance. The bearing is enclosed within a tough polyamide tread to reduce noise and provide long service life.

Optional Features

- Direct mounting for planetary gear reducers
- Adjustable "end of travel" limit switches and "home" position sensor
- Clean room preparation option
- Cable carrier systems
- Performance matched Parker servo systems
- Structural components for vertical and multi-axis mounting
- Toe clamps and hardware for fast and easy mounting
- External bumpers
- Link shafts and support bearings for dual axis units
- Splice plates for extending travels beyond length available in a single profile

IP30 Strip Seal

Magnetically attached stainless steel seal strip (not shown) provides environmental protection to interior components.

HPLA/HLE OPTIONS & ACCESSORIES

Limit and home sensors, switches, cable carriers, splice plates, and more. See Options & Accessories at the end of the belt-driven section.

SPECIFICATIONS

HLE-RB Series

SPECIFICATIONS

As part of the advanced, cost-effective construction of machines and handling systems, the HPLA is a good choice for applications such as materials handling (palletizing, depalletizing, feeding, and part removal), warehouse technology (parts picking, storage and retrieval), and machine tool automation (workpiece loading and unloading, tool changing). Additional examples include textile machinery building (cross-cutting, slitting and stacking, quilting, seam stitching) and construction (formwork and placing reinforcing steel bars in concrete).

Other typical applications are process engineering (painting, coating, bonding), testing technology (guiding ultrasonic sensors, laboratory equipment), and cleanroom technology (wafer transport, wafer coating).

Repeatability ⁽⁴⁾	mm (in)	±0.2	(±0.008)	±0.2	(±0.008)	±0.2	(±0.008)

For the following deviations from the above standards, please contact Parker engineering:

(1) Greater speeds and accelerations may be achieved.

(2) Splicing possible for longer travel distances. This may cause reductions in effective load, drive torque, speed, acceleration, and repeatability. Consult factory for strip seal availability on spliced units.

(3) Increased timing belt tension required.

(4) Nominal value - component dependent. For improved repeatability consult factory.

The T-slots of the load attachment plate and the HLE profile are suitable for T-nuts and T-bolts.

Plastic caps protect the interior from dust.

A spring-loaded felt insert cleans the strip seal.

HLE60-RB Series – Load-Bearing Capacity of Carriage and Timing Belt

Load-Bearing Capacity of HLE-60RB Timing Belt (Fx)

HLE60-RB	Transferable Thrust Force (n)	
Drive Option	Nominal Belt Tension (81,000 km life)	Maximum Belt Tension (46,000 km life)
Supported Pulley (SP19 - SP30)	500	—

The forces and moments that the carriage is capable of transferring are speed-dependent. The curves shown in the graphs apply to a standard carriage (S). With the extended carriage (E), all the values apart from Fx (load-bearing capacity of timing belt)

can be doubled if the load is applied equally to both halves of the carriage or distributed uniformly along its entire length.

HLE60-RB Load-Bearing Capacity (Fy and Fz)

(Values double for extended carriage)

The curves show the maximum load-bearing capacity of a carriage in one direction of force or torque. If several loads are applied in different directions, the values given by the curves must be derated, i.e. the load or speed should be reduced if necessary.

HLE60-RB Maximum Permissible Moment Load (Mx, My and Mz)

(Values double for extended carriage)

Virtual Engineer software is available for determination of precise carriage loading.

parker.com/VirtualEngineer

HLE100-RB Series – Load-Bearing Capacity of Carriage and Timing Belt

Load-Bearing Capacity of HLE100 Timing Belt (F_x)

The forces and moments that the carriage is capable of transferring are speed-dependent. The curves shown in the graphs apply to a standard carriage (S). With the extended carriage (E), all the values apart from F_x (load-bearing capacity of timing belt) can be doubled if the load is applied equally to both halves of the carriage or distributed uniformly along its entire length.

HLE-RB Deflection Characteristics

The HLE deflection curves can be used for determining the deflection based on the profile length and the application load weight. Applications requiring high acceleration forces can place a severe strain on the system stability. In these cases, a solid substructure may be required with the HLE product being supported at frequent intervals.

These deflection curves illustrate the deflection δ , based on the HLE profile being simply supported at both ends. The graphs take into consideration the self deflection due to the weight of the profile, along with the load to be transported. The maximum deflection cannot be exceeded. If the maximum deflection is exceeded based on your application parameters, then additional supports are required. Alternatively, the next larger profile size may be considered. For deflection formulas and calculations, please refer to the Technical Information Library found on our web site www.parkermotion.com

HLE-SR Series Belt Driven Linear Modules

Belt-Drive Actuators for High Thrust, Long Stroke Applications

- Low running friction
- Low wear and low maintenance
- Quiet operation
- High efficiency
- Long service life
- High dynamic performance due to high load capacity square rail systems

Proven Technology

- Easily accessible lubrication points
- Minimal preventive maintenance required
- T-slots integrated on sides of the profile for mounting attachments or for use as a cable duct
- Timing belts can be replaced without removing load attachment plate
- Multiple configuration options due to T-slots available on both the profile and load plate

	HLE60	HPLA80	HLE100	HPLA120	HLE150	HPLA180
Maximum Travel (mm)	4,000	5,540	6,200	9,470	7,900	9,240
Maximum Payload (N)	353	1,304	1,549	2,598	3,402	4,501
Maximum Acceleration (m/s²)	10	10	10	10	10	10

*Do not exceed allowable axial and moment loading.

HLE-SR Bearing System

The bearing system is the principal distinction between the RB (Roller Bearing) type modules and the SR (Square Rail) type. The SR employs a square rail bearing system, which permits greater load carrying capability without increasing overall size. Square

rail bearings are recirculating ball bearings designed to move heavy loads on a precise linear path. Linear guides, which house several rows of re-circulating ball bearings, ride on a high strength, steel square rail. The steel square rail cross section enables bearing ways to be ground into the

sides of the rail. These bearing ways are shaped in an arch which approximates the same radius as the ball bearing. This increases the contact surface between the ball and the rail, thereby increasing the load capacity of the linear bearing.

HLE-SR Drive Principle

The HLE-SR employs the same high performance belt and pulley drive mechanism as the HLE-RB. It features a zero backlash steel reinforced timing belt drive,

which provides high speeds, high acceleration, and good bidirectional repeatability. A belt tension station, conveniently located at the end of the unit provides for quick and easy

belt adjustment. The drive station is designed to accept planetary gear reducers as well as a wide variety of servo and stepper motors.

- ① Carriage**
 A rigid carriage assembly is built upon two bearing housings which contain several rows of recirculating ball bearings designed to ride in grooves ground into a steel square rail linear raceway. Longer or custom carriages are also available.
 - ② Drive Belt**
 A zero backlash, steel reinforced timing belt provides high speed, high acceleration and high bidirectional repeatability. A serrated clamp mechanism between belt and carriage guarantees a safe and strong connection.
 - ③ Housing**
 The HLE-SR housing is a light-weight, compact and self-supporting extruded aluminum section. It is available in two cross-sections: 60 x 60 mm (HLE60) and 100 x 100 mm (HLE100). T-slots along the length are utilized for clamping mechanical components, joining units, and attaching sensors or mechanical switches.
 - ④ Bearing Raceway**
 A high strength steel alloy bearing rail features precision ground "gothic arch" raceways to provide precise translation and high strength support of the recirculating ball bearings.
 - ⑤ Optional IP30 Strip Seal**
 Magnetically attached stainless steel seal strip provides environmental protection to interior components.
- Optional Features**
- Direct mounting for planetary gear reducers
 - Adjustable "end of travel" limit switches and "Home" position sensor
 - Cable carrier systems
 - Performance matched Parker servo systems
 - Structural components for vertical and multi-axis mounting
 - Toe clamps and hardware for fast/easy mounting
 - External bumpers
 - Link shafts and support bearing for dual unit axes
 - Splice plates for extending travels beyond length available in a single profile

SPECIFICATIONS

SPECIFICATIONS

As part of the advanced, cost-effective construction of machines and handling systems, the HPLA is a good choice for applications such as materials handling (palletizing, depalletizing, feeding, and part removal), warehouse technology (parts picking, storage and retrieval), and machine tool automation (workpiece loading and unloading, tool changing). Additional examples include textile machinery building (cross-cutting, slitting and stacking, quilting, seam stitching) and construction (formwork and placing reinforcing steel bars in concrete).

Other typical applications are process engineering (painting, coating, bonding), testing technology (guiding ultrasonic sensors, laboratory equipment), and cleanroom technology (wafer transport, wafer coating).

Characteristic	Units	HLE60-SR		HLE100-SR	
Unit Weight (basic unit without stroke)					
Standard Carriage, NL	kg (lb.)	3.5	(7.7)	16.2	(35.7)
Extended Carriage, VL	kg (lb.)	5.91	(13)	20.0	(44.1)
Carriage Weight					
Standard Carriage, NL	kg. (lb)	1.8	(4.0)	2.2	(4.9)
Extended Carriage, VL	kg. (lb)	2.1	(4.6)	3.8	(8.4)
Weight per meter of additional length	kg/m (lb/ft)	5.5	(3.7)	13.3	(8.9)
Moment of Inertia (related to the drive shaft)					
Standard Carriage, NL	kg-cm ² (lb-in ²)	3.52	(1.20)	34.8	(11.9)
Extended Carriage, VL	kg-cm ² (lb-in ²)	5.20	(1.83)	52.2	(17.9)
Travel and Speed					
Maximum Speed ⁽¹⁾	m/s (in/s)	3	(120)	3	(120)
Maximum Acceleration ⁽¹⁾	m/s ² (in/s ²)	10	(393)	10	(393)
Maximum Travel ⁽²⁾ , NL	m (in)	3.05	(120)	6.15	(242)
Maximum Travel ⁽²⁾ , VL	m (in)	2.8	(114)	6.0	(236)
Geometric Data					
Cross Section, Square	mm (in)	57.2	(2.25)	100	(3.94)
Moment of Inertia I _x	cm ⁴ (in ⁴)	48.3	(1.16)	377	(9.06)
Moment of Inertia I _y	cm ⁴ (in ⁴)	59.5	(1.43)	432	(10.38)
Moment of Elasticity	N/mm ² (lb/in ²)	0.72 x 10 ⁵	(0.1044 x 10 ⁸)	0.72 x 10 ⁵	(0.1044 x 10 ⁸)
Pulley Data, Torques, Forces					
Travel Distance per Revolution	mm/rev (in/rev)	125	(4.92)	240.0	(9.45)
Pulley Diameter	mm (in)	39.8	(1.57)	74.5	(2.93)
Maximum Drive Torque ⁽³⁾	Nm (lb-in)	8.87	(79)	61.5	(544)
Maximum Belt Traction ⁽³⁾ (effective load)	N (lb)	668	(150)	1650	(371)
Repeatability ⁽⁴⁾	mm (in)	±0.2	(±0.008)	±0.2	(±0.008)

For the following deviations from the above standards, please contact Parker engineering: (1) Greater speeds and accelerations may be achieved.

(2) Splicing possible for longer travel distances. This may cause reductions in effective load, drive torque, speed, acceleration, and repeatability.

(3) Increased timing belt tension required. (4) Nominal value - component dependant. For improved repeatability consult factory.

HPLA/HLE OPTIONS & ACCESSORIES

Limit and home sensors, switches, cable carriers, splice plates, and more.

See Options & Accessories at the end of the belt-driven section.

HLE-60SR Series – Load-Bearing Capacity of Carriage and Timing Belt

Load-Bearing Capacity of HLE-60SR Timing Belt (F_x)

Drive Option	Transferrable Thrust Force (n)	
	Nominal Belt Tension (81,000 km life)	Maximum Belt Tension (46,000 km life)
Supported Pulley (SP19 - SP30)	500	—

The forces and moments that the carriage is capable of transferring are speed-dependent. The curves shown in the graphs apply to a standard carriage (S).

With the extended carriage (E), all the values apart from

F_x (load-bearing capacity of timing belt) can be doubled if the load is applied equally to both halves of the carriage or distributed uniformly along its entire length.

HLE-60SR Load-Bearing Capacity (F_y and F_z) (Values double for extended carriage)

The curves show the maximum load-bearing capacity of a carriage in one direction of force or torque. If several loads are applied in different directions, the values given by the curves must be derated, i.e. the load or speed should be reduced if necessary.

Virtual Engineer software is available for determination of precise carriage loading.

parker.com/VirtualEngineer

HLE-SR Deflection Characteristics

The HLE deflection curves can be used for determining the deflection based on the profile length and the application load weight. Applications requiring high acceleration forces can place a severe strain on the system stability. In these cases, a solid substructure may be required with the HLE product being supported at frequent intervals.

These deflection curves illustrate the deflection δ , based on the HLE profile being simply supported at both ends. The graphs take into consideration the self deflection due to the weight of the profile, along with the load to be transported. The maximum deflection cannot be exceeded unless additional supports are implemented. Alternatively, the next larger profile size may be considered. For deflection formulas and calculations, please refer to the Technical Information Library found on our web site www.parkermotion.com.

F = Force N
L = Unsupported length mm

HZR Series

Belt-Drive Actuators for High Speed, Long Stroke Vertical Applications

- Designed as a vertical axis unit
- Load lifting capacities up to 150 kg
- Velocity up to 5 meters/sec.
- Positional repeatability of ± 0.2 mm
- Torsion-resistant housing
- Roller wheel bearings for smooth vertical motion
- High vertical acceleration

Typical Fields of Application

- Materials handling: palletization, feeding, removal
- Textile machinery building: crosscutting, slitting and stacking, quilting, seam stitching
- Process engineering: painting, coating, bonding
- Storage technology: commissioning, inventory
- Machine tool building: workpiece loading, tool changing
- Testing technology: guiding ultrasonic sensors

The HZR is a rugged vertical axis unit unique to the high speed automation industry. It is specifically designed to satisfy the mechanical demands placed on the vertical axis of a multi-axis gantry robot – utilized for high throughput lifting and transporting of heavy or bulky loads.

The payload is supported by a high strength extruded aluminum profile which is lifted and guided through a torsion-resistant cast aluminum housing. Maintenance-free, heavy duty polyamide bearing wheels evenly distribute and support the

high forces induced by rapid horizontal acceleration of the load. A wear-free, steel cord reinforced timing belt transmits large traction forces to provide high accelerations and lifting capability in the vertical direction.

1 For higher speeds, accelerations or longer travel consult Parker Application Engineering for assistance.

Force and Moment Loads

The forces and moments that the carriage is capable of transferring are speed-dependent. The curves shown in the graphs apply to a standard guiding (P). With the extended guiding (E), all the values apart from F_x (load-bearing capacity of timing belt) can be doubled if the load is applied equally to both halves of the carriage or distributed uniformly along its entire length.

The curves show the maximum load-bearing capacity of a carriage in one direction of force or torque. If several loads are applied in different directions, the values given by the curves must be derated, i.e. the load or speed should be reduced if necessary.

Virtual Engineer software is available for determination of precise carriage loading.

Parker Gantry Robot Systems

Minimize Your Engineering Effort

Parker's gantry systems provide cost-effective, easy to integrate solutions that satisfy the vast majority of automation requirements. In addition to our standard gantry systems, Parker offers products with additional capabilities to fulfill the needs of special applications. Our engineering skill and manufacturing expertise have integrated these products into custom-tailored gantry solutions which have successfully addressed the most unique and exacting requirements of machine builders and integrators around the world.

Additional Capabilities

- Motors, Drives and Controls
- Extended Travels
- Rotary Motion Modules
- Cleanroom Preparations
- External Position Feedback
- Vertical Axis Brakes
- End Effectors
- Protective Guarding
- Custom Support Structures

Belt Driven
Tables

Gantry Robot Elements

Seven Standard Configurations

Parker's seven standard system configurations are designed to satisfy the vast majority of gantry robot applications. By standardizing on these configurations, Parker has simplified sizing and selection, shortened lead times, and reduced costs for users of these systems. The travels and loads indicated are nominal, and should not be considered limiting factors. Longer travels and increased loads are attainable depending upon the combination of parameters.

System One

Two Axis: $XX' - Z$

System Four

Two Axis: $XX' - Z$

System Five

Two Axis: $XX' - Z$

System Two

Two Axis: $XX' - YY'$

System Six

Three Axis: $XX' - YY' - Z$

System Three

Two Axis: $XX' - Z$

System Seven

Three Axis: $XX' - YY' - Z$

System One

System One provides two axes of horizontal motion. The primary axis (X) is comprised of two HPLA or HLE Linear Modules linked by a common drive shaft, and the secondary axis (Y) is comprised of one HPLA or HLE Linear Module. These linear modules are capable of high speeds and accelerations over long travels. This system is designed for rapid transport of light to moderate loads in a single horizontal plane.

Parker Hannifin Corporation • Electromechanical & Drives Division • Irwin, Pennsylvania • 800-358-9070 • www.parker.com/emn

System Two

System Two utilizes two linear modules in both axes (X & Y). The second linear module of the Y-axis is an idler unit which increases load capacity (normal and moment) and permits longer travel. The addition of this unit doubles the load capacity over System One. Traction force can be improved by linking the second axis (Y) module to the first with a common drive shaft. The link shaft doubles the potential acceleration of the system. This system is intended for moderate to heavy loads.

System Three

System Three provides two axes of motion in a vertical plane. A ballscrew driven ET Cylinder is utilized to provide high thrust in the vertical direction. ET Rod Guides, in conjunction with the dual X-axis, minimize the effects of moment and side loading, permitting higher acceleration of the payload.

System Six

System Six is a three-axes version of System Two. HPLA/ HLE linear modules provide motion in the X and Y directions while a vertically mounted ET cylinder provides the third axis (Z) of motion. The ET cylinder provides high vertical thrust capacity at moderate speeds. With the Z-axis retracted, this system can transport moderate to heavy loads at high rates of speed over long travel distances.

System Seven

System Seven is a three-axes system which utilizes the HZR unit for the vertical axis. As a result, this system can provide longer vertical travel, higher speed, and greater acceleration than System Six. The inherent rigidity of the HZR also contributes to superior system stiffness, stability, and ease of tuning. If the Z-axis is retracted during horizontal motion, System Seven can easily handle moderate to heavy loads. With the Z-axis fully extended it can handle light to moderate loads.

Gantry Systems Capabilities & Accessories

Parker's gantry systems provide cost-effective, easy to integrate solutions that satisfy the vast majority of automation requirements. In addition to these standard gantry systems, Parker offers products with additional capabilities to fulfill the needs of special applications. Our engineering skill and manufacturing expertise have integrated these products into custom-tailored gantry solutions which have successfully addressed the most unique and exacting requirements of machine builders and integrators around the world.

Support Structures

Parker can include the support structure and machine guarding as part of your complete system solution. Parker's ParFrame™ extruded aluminum structures are suited for light to medium duty requirements. High strength steel supports are offered for applications involving greater loads and forces.

Aluminum Structures

- Lightweight aluminum extrusions
- Economical modular construction
- Standard metric sizes – compatible with linear drive units

Steel Support Structures

- Heavy duty support
- High system stiffness
- Ideal for higher overhead gantries
- Engineered and fabricated to customer specifications

HPLA/HLE/HZR OPTIONS & ACCESSORIES

OPTIONS & ACCESSORIES

Limit and Home Sensors

“End of Travel” Limit Sensors are offered to assure safe operation of the unit by restricting travel to within allowable parameters. This range is dependent upon the load, velocity and acceleration factors determined by the application.

A “Home” Sensor can be positioned to establish a “Machine Start-up” location within the range of travel. Either mechanical or electrical proximity switches can be selected. Limit sensors can be easily positioned along the length of travel to further reduce the allowable operating envelope.

Electrical Proximity Switches

4-wire NPN switch with mounting hardware

Product	Part Number
HPLA (all models):	002-2440-03
HLE60-RB, HLE60-SR	002-1892-01
HLE100-RB, HLE100-SR	510-900010
HLE150-RB, HLE150-Z	510-900030

4-wire PNP switch with mounting hardware

Product	Part Number
HPLA (all models):	002-2440-01
HLE60-RB, HLE60-SR	002-1892-02
HLE100-RB, HLE100-SR	510-900020
HLE150-RB, HLE150-Z	510-900040

Inductive proximity switches are triggered by a standard tripping plate mounted to the side of the carriage. Available in both NPN and PNP 4-wire DC complementary outputs, the switches can be wired either NO or NC operation.

Sensing Distance	4 mm ± 10%
Voltage Supply	10-30 VDC
Switching Capacity	200 mA
Switching Response	2000 Hz
Current Consumption	<200 mA
Voltage Drop	<3 V
Protection Class	IP67
Operating Temperature	-25° C to 70° C (-13° F to 158° F)
Lead Termination	5 meter (200 in)
Reverse Polarity Protection	Yes
Short Circuit Protection	Yes

Belt Driven

Cable Carriers

Typical Cross Sections

A cable carrier assembly is normally needed to transport cables to the carriage or custom payload. A complete cable carrier assembly includes the carrier, trough, end brackets, and mounting hardware. The cable carrier should be specifically matched to the linear actuator and other application requirements. Because of the extreme amount of cable flexing associated with high speed cable management, Parker uses only long life high-flex cables with its gantry systems. We recommend that all electric cables be approved for high speed cable carrier usage and that manufacturer's guidelines for bend radii are followed.

Cable Carrier Guidelines

Hose lines should be highly flexible and should only extend slightly under pressure. Weight should be distributed across the cable track as evenly as possible. Cables must not be twisted when routed in the cable carrier and should be routed next to one another with approximately 10% additional space.

Avoid laying several lines on top of each other and laying lines of different diameters directly next to one another. If multiple layers must be used, dividers should be inserted between each layer – should such circumstances arise, please contact a Parker application engineer. If there is no alternative to routing several lines beside each other without subdivisions, the clearance height within the carrier must be less than line diameter. This is the only way of preventing the cables from twisting. The supply cables must be able to move freely in the cable carrier – they must never be fastened or bundled together. Separating strips must always be inserted between flat cables routed in multiple layers.

Due to diversity of the requirements associated with high speed cable management systems, it is recommended that you contact your Parker applications engineer.

Toe Clamps

The toe clamps are used to rapidly install and fasten various combinations of linear actuators to each other; to a ParFrame™ structure; or to a mounting surface. Two clamps are required to fasten an HLE, HPLA, or HLEZ to a load attachment plate. The table at right shows the profiles for the various axis combinations.

Dimensions

Used With	Part Number	A	B	C	D	E	F	G	X
HLE60-RB, HLE60-SR	000-7752-01	54	18	10	12	6	43	M5	70
HPLA080	500-000931	76	27	17	20	10	48	M5	100

HPLA180	500-000920	170	45	36	30	15	110	M10	210
HLE150-RB, HLE150-Z	500-000902	140	40	30	25	12	90	M8	176

Splice Plates

Splice Plates enable travels to be extended significantly beyond the standard range which is limited by extrusion length. Design concepts and factory installation expertise combine to produce perfectly spliced units which are easily recreated on site. The splice plate connection is only recommended for units with the carriage in the top or the bottom position.

Dimensions

Model/Size	A	B	C	Ref.
HPLA080	300	70	15	80
HLE100-RB, HLE100-SR	400	90	15	100
HPLA120	400	110	15	120

External Bumpers

External bumpers serve as adjustable hard stops. They are fitted to the grooves in the housing profile and are often utilized for restricting total travel.
