

CFW11 - System Drive

Variable Speed Drives

CFW11 - System Drive

The CFW11 is a system drive designed for the control of squirrel cage induction motor as well as permanent magnet type ones. Since it was developed for running on Normal and Heavy Duty mode, a big variety of applications can be achieved.

Designed for exclusively industrial or professional use, provides increased productivity with excellent performance and an improvement in the quality of the process in which it is used.

Innovative and Simple

The CFW11 presents many innovations that are helpful and beneficial to customers, mainly due to the simplicity of its installation and operation. The CFW11 was developed based on Plug & Play philosophy (connect and use) allowing simple and fast installation of the VSD and its accessories.

The Keypad has a navigation and programming system similar to mobile phones, with soft-key buttons. It is possible to access the parameters sequentially or through groups of parameters. The Keypad also makes the Oriented Start-up function available, guiding the user through the necessary programming.

Flexibility

The CFW11 adapts to the customer's needs through a broad range of accessories which are easily installed. Besides this, the standard product comes with a small PLC, called SoftPLC, that offers PLC functionalities and it allows the costumer for creation of his/her own user applications through the WLP software (Ladder programming).

1.1 to 2.2 kW - 1.5 to 3 HP
200-240 V ac - Single-phase

1.1 to 55 kW - 1.5 to 75 HP
200-240 V ac - Three-phase

1.5 to 415 kW - 2 to 600 HP
380-480 V ac - Three-phase

1.5 to 630 kW - 2 to 900 HP
500-600 V ac - Three-phase

1.5 to 630 kW - 3 to 900 HP
660-690 V ac - Three-phase

Certifications

Own Technology

Vectrue Technology®

- Linear and adjustable V/F, VVW (Voltage Vector WEG) and vector control are available in the same product
- Two types of vector control: sensorless and closed loop vector control (encoder Interface required)
- Sensorless vector control permits high torque and quick response in open loop, even at low speeds
- The self-tuning function automatically matches the vector control or VVW to the motor and load used
- Through the adjustable V/F control, it is possible, for example, to adjust a quadratic V/F curve, providing energy savings for quadratic torque loads (e.g.: centrifugal pumps and fans)

Typical Braking Torque x Speed Graph for a 10 HP / 7.5 kW motor driven by a CFW11

- Dynamic Braking Torque Curve
- Optimal Braking® Torque Curve
- DC Braking Torque Curve

Optimal Braking®

Applications involving high inertia loads and, when short deceleration times are required, a large amount of energy is returned from the motor to the VSD. To handle this energy, traditional VSDs have to dissipate it as heat in power resistors. Such resistors are usually large and some installation criteria must be considered due to their heat dissipation. As an alternative to the use of braking resistors, CFW11 features a special braking method in vector control mode known as Optimal Braking®. This innovation delivers a high performance braking torque without requiring a braking resistor. The following graph shows the advantages of using Optimal Braking® compared to other methods, thus ensuring an optimized and low cost solution for braking applications.

WMagnet Drive System®

Variable Speed Drive controlling permanent magnet motors. The WMagnet System (WMagnet motor + CFW11) has the highest efficiency levels in the market. It is a perfect match for applications where speed variation, low noise level and reduced size are required. In Sensorless mode the WMagnet System is able to perform torque control at zero speed without the need for forced ventilation.

Main Characteristics of the Set CFW11 + WMagnet Motor

- Voltage range: 380 V to 480 V ac
- Power rating: 11 to 160 kW (15 to 220 HP)
- Methods of control: sensorless vector and closed loop control (vector with encoder)
- WMagnet control algorithm included on the CFW11 standard version
- All Communication Modules available in the standard product

Optimal Flux®

Technology for motors driven by VSDs in applications with constant torque loads:

- Rated torque at low speeds eliminating the need for independent ventilation or motor oversizing
- Space saving and cost reduction of the application
- Improved performance of the package VSD and motor (an exclusive WEG solution)

The Optimal flux function works when the set: high efficiency WEG motor + CFW11 is used.

Technical Features

Built-In DC Link Reactor

- Allows the VSD to be installed in any network (there is no minimum impedance restriction)
- Typical power factor (PF) for rated condition:
 - 0.94 for models with three-phase supply
 - 0.70 for models with single-phase
 - 0.70 for models with single-phase supply/three-phase supply = 0.94
- Displacement power factor > 0.98
- Meets the 61000-3-12 standard, related to low order current harmonics in the network
- Available until frame size G, for the frame size H is mandatory use external reactor

Note: no need for external line reactor, up to frame size G.

Conformal Coating

An special varnish is applied on electronic boards of the CFW11, extending lifespan, protecting against dust, humidity, high temperatures and chemical substances. Classified as 3C2 according to IEC 60721-3-3 as standard for the complete line.

Single DC Busbar

Usually used in multi-motor systems, common DC bus configuration is a good solution for energy savings. In this configuration, individual VSD rectifier bridges are replaced with a common input rectifier unit. Each VSD is then directly fed from the DC bus to its DC link terminals.

This solution allows the energy in the DC bus to be shared among the VSDs connected to it, thus optimizing the power consumption in the system.

The standard CFW11 sizes A to E and special hardware version (DC) for frame sizes F, G and H can be connected to a DC bus system. (When required, the factory should be consulted for further details)

Note: an extra pre-charge circuit must be added to each of the VSDs.

Intelligent Thermal Management

- Monitoring of the heatsink and internal air temperatures of the electronic boards, providing total protection of the IGBTs and the CFW11 as a whole
- The heatsink fan is turned on and off automatically, depending on the temperature of the power modules
- The speed and the fan's operation hours number are monitored and indicated in corresponding parameters. Alarm or fault messages are generated related to these variables
- The fan can be easily removed for cleaning or replacement

Flexibility is Our Philosophy

The CFW11 was developed based on Plug & Play philosophy, identifying automatically the accessories plugged in, as well as easy installation and safe operation with no need for extra configuration.

Functions

- **Multi-speed:** up to 8 pre-programmed speeds
- **PID regulator:** automatic control of level, pressure, flow, weight, etc.
- **Ride-through:** operation during momentary loss of the power supply
- **Skip frequency:** rejection of critical or resonant speeds
- **S ramp:** smooth acceleration / deceleration

- IGBT braking (chopper) can be offered built-in or with external module (DBW03)
- Encoder module can do the interface between the Drive and Motor, promoting the closed-loop speed and position control
- Temperature monitoring of motor probes (PTC, PT-100, KTY84), providing thermal protection to the motor (accessory is necessary)
- Operating air temperature up to 60 °C (140 °F) for sizes A to D, and up to 55 °C (131 °F) for size E, F, G and H with derating (check page 26)
- Motor overload protection according to IEC 60497-4-2 and UL 508 C

Applications

The CFW11 can be used in both simple and sophisticated applications, due to its broad range of functions and easy configuration, installation and operation. The CFW11, through its vectrue inverter technology, presents excellent static and dynamic performance, precise torque and speed control, dynamic response, positioning precision, and high overload capacity. The CFW11 was also developed for applications where the decisive factor is safety, through several built-in protections and alarms as well as through the safety stop function in accordance with EN 954-1, category III.

Cement and Mining

- Robust and large overload capacity (models sized in HD)
- Provided in a compact design the CFW11 Series allows the assembly directly next to one another with no derating
- Possibility to be integrated in a variety of communication protocols commonly used in industry
- Quick and simplified programming
- Highly reliable and robust
- For large power ratings, modular topology is used

Pumps and Fans

- Precise control of process variables (pressure, flow, temperature, etc.) through a PID regulator superposed to the speed control
- Optimization of power consumption through speed control with an adjustable V/F curve
- Possibility of safety and maintenance signalling, and alarms of pumps and fans
- Availability of PID regulators to control other process accessories like valves, dumpers, other VSDs, etc.

Compressors

- Optimization of system pressurization control with energy savings and improvement of compressor efficiency
- Reduction of motor startup current, minimizing wear and tear of the mechanical system, avoiding fees charged by the power supplier company
- Possibility of safety and maintenance signaling and alarms of pressurization system
- Provides startup system control of other compressor units with an increased efficiency of the pressurization system

Sugar and Alcohol

- Modular and compact
- 12-pulse rectifier for reduction of harmonic content
- Regenerative braking for centrifuges
- Highly robust and reliable

OverHead Cranes / Lifting

- SoftPLC function
- Three modes of vector control
- Highly compact
- Intelligent control of ventilation system

Process Machines

- Built-in PLC and real time clock
- Easiness and flexibility for connecting to the most used fieldbus network
- Fieldbus
- Precise speed and torque in all speed ranges
- User friendly interface and programming

Applications

Paper and Cellulose / Wood

- Four monitoring parameters displayed at once on the keypad
- USB communication port at the front of the VSD for data monitoring and parameters configuration via software SuperDrive
- Precise speed and torque control
- Flexible hardware programming and configuration, making applications where synchronism is required easier
- Possibility to be integrated in a variety of communication protocols commonly used in industry
- Provided in a compact design the CFW11 Series allows the assembly directly next to one another with no derating
- Quick and simplified programming
- Highly reliable and robust
- For large power ratings, modular topology can be used

Multi-Pump Control

The CFW11 features the Multipump Control, which permits the CFW11 to control up to 5 pumps in order to keep constant pressure regardless of the flow fluctuations. In this system, an intelligent algorithm control of pumps provided by means of a user application developed to run on CFW11 decides when to start or stop each pump based on the system demand. Besides that, the VSD also monitors the suction pressure and the tank level. The CFW11 also alternates the pumps according to their operating time, thus ensuring an uniform wear and tear of

motors and pumps. Two types of Multipump Control are available: fixed and floating controls. In fixed control, the VSD is able to control one of the pumps at variable speed and to start and stop another 4 pumps at fixed speed. In floating control, the VSD is able to control up to 4 pumps, all of them at variable speed. The Multipump Control for CFW11 is available as an user application for running on SoftPLC (see page 16) and can be downloaded from WEG website.

Ironworks and Metallurgy

- Highly precise speed and torque control
- Large overload capacity (models sized in HD)
- Flexible hardware programming and configuration
- Possibility to be integrated in a variety of communication protocols mainly used in the industry
- Provided in a compact design the CFW11 series allows the assembly directly next to one another with no derating
- For large power ratings, modular topology is used

Chemical and Petrochemical

- Highly reliable and robust
- Provided in a compact design the CFW11 Series allows the assembly directly next to one another with no derating
- Plug & Play system for additional modules, ensuring greater flexibility in adapting to existing systems
- Possibility to be integrated in a variety of communication protocols commonly used in the industry

Cooling

- SoftPLC function built in the standard product enabling the use of two controllers simultaneously. This characteristic is for HVAC applications
- Three monitoring parameters displayed at once on the keypad
- USB communication port at the front of the VSD for data monitoring and parameters configuration via software SuperDrive G2

Intuitive

The CFW11 keypad was developed for simple and fast interaction while providing excellent visibility for the user.

Easy to Use Interface Tools

- Graphic display
- Soft-keys for easy operation
- Backlight
- Real time clock
- Copy function
- Plug-in (connection with CFW11 turned on)
- Language selection
- Remote keypad

Left soft-key: function defined by the display

Right soft-key: function defined by the display

FWD/REV selection key

Local / Remote selection key

Key for scrolling through menus and parameters and for modifying parameter content

Start key

Stop key

JOG key

Remote Keypad

The keypad can be installed on panel doors or machine consoles with a IP56 protection degree.

Human Machine Interface

The keypad can be configured to display reading parameters in three different modes.

The keypad displays parameters in a hierarchy mode organized by groups.

Oriented Start-Up

For simplified Start-up, the CFW11 guides the user through the necessary programming to adjust the VSD to the motor and power supply.

Basic Application

The Basic Application Group contains the basic parameters, which need to be adjusted in most applications. The CFW11 guides the user through these parameters.

Fault History Group

It shows the parameters with the last 10 faults and the day, month, year and time when they occurred.

Read Only Parameters Group

It shows reading parameters only.

Backup Parameters Group

The Backup Parameters Group allows CFW11 parameters to be transferred to the Keypad or FLASH memory module (available in the standard product) and vice versa. During CFW11 operation, the modified parameters are saved in the FLASH memory module automatically.

Functions Group

The keypad offers the functionality of displaying parameter groups in individual folders where each of them shows specific configurations. For example: I/O configuration, self-tuning procedure, basic parameters, etc.

Selectable Language

The user can choose the keypad language: portuguese, english, spanish, german, french.

Changed Parameters Group

It shows only the parameters that have been programmed differently from the factory default.

Accessories

	Name	Description	Slot	Appearance
I/O expansion	IOA-01	1 14-bit analog inputs in voltage or current 2 digital inputs 2 14-bit analog outputs in voltage or current 2 open collector digital outputs	1	
	IOB-01	2 isolated 12-bit analog inputs 2 digital inputs 2 isolated 11-bit analog outputs in voltage or current 2 open collector digital outputs	1	
	IOC-01	8 digital inputs 4 digital outputs (use with SoftPLC)	1	
	IOC-02	8 digital inputs 8 open collector digital outputs (use with SoftPLC)	1	
Temperature transducers	IOE-01	5 PTC type temperature sensor inputs	1	
	IOE-02	5 PT-100 type temperature sensor inputs	1	
	IOE-03	5 KTY84 type temperature sensor inputs	1	
Interface with encoder	ENC-01	Incremental encoder module 5 to 12 V dc (internal power supply) 100 kHz With encoder signal repeater (external power supply needed)	2	
	ENC-02	Incremental encoder module 5 to 12 V dc (internal power supply) 100 kHz	2	

Blank Cover - HMID - 01 ¹⁾

Blank cover to replace the standard VSD keypad, when it is not used.

Note: 1) This optional must be factory fitted and orders must specify on the product coding (page 17) the desired option.

Remote Keypad Frame - RHMIF-01

Frame for keypad installation on panel door or machine console.
IP56 protection degree.

Accessories

Accessories

Kit for Power Cable Shielding

CFW11 has a kit to simplify the connection of the motor cable shield to ground, providing a low-impedance connection for high frequencies.

Name	Description
PCSA-01	Kit for power cable shielding for frame size A
PCSB-01	Kit for power cable shielding for frame size B
PCSC-01	Kit for power cable shielding for frame size C
PCSD-01	Kit for power cable shielding for frame size D or 2D (IP54)
PCSE-01	Kit for power cable shielding for frame size E or 3 (IP54)
PCS1-01	Kit for power cable shielding for frame size 1 (IP54)
PCSC-02	Kit for power cable shielding for frame size 2C

Notes: 1) The kit for power cable shielding PCSD-01, PCSE-01 is provided along with VSDs having factory fitted RFI filter. Example: EU CFW11 0007 T 2 O FA Z.
2) In frame sizes D and E the power cable shielding kit is factory standard, even for VSDs without internal RFI filter.
3) N/A for frame sizes F, G and H.

Enclosures

Standards	Ratings	Frame sizes						
		A	B	C	D	E	F & G	Mec H
IEC	IP20	-	-	-	X	X	X	X
	IP21	X	X	X	KIP21D-01	-	-	-
NEMA	TYPE 1	KN1A-01	KN1B-01	KN1C-01	X	KN1E-01 / KN1E-02	KN1F-01 / KN1G-01	-

Note: (X) Standard
(-) N/A

Standard	Accessory	Composition
NEMA Type1	KN1A-01	Conduit kit frame size A
	KN1B-01	Conduit kit frame size B
	KN1C-01	Conduit kit frame size C
	KN1E-01	Top cover size E models 105 and 142
	KN1E-02	Top cover + Conduit kit size E models 180 and 211
	KN1F-01	Conduit kit for frame size F
	KN1G-01	Conduit kit for frame size G
IEC	KIP21A-01	Top cover kit frame size A
	KIP21B-01	Top cover kit frame size B
	KIP21C-01	Top cover kit frame size C
	KIP21D-01	Top cover kit frame size D

Note: in the KN1X-01 conduit kit (frame sizes A, B and C) power cable shielding is also provided.

Optionals

Safety Stop in Accordance with EN 61800-5-2, EN ISO 13849-1, IEC 62061, IEC 61508 Parts 1-7, EN 50178, IEC 60204-1, Cat. 3/PL d acc. and SIL CL2 acc.

With the activation of the safety stop function, the PWM pulses of the IGBTs are disabled. Since no torque is applied to the motor thus, it is ensured that the motor remains stopped providing system safety.

Note: this optional must be factory fitted (see product coding on page 17).

External Control Supply in 24 V dc ¹⁾

Used with communication networks (Profibus-DP, DeviceNet, EtherNet/IP, etc.) so that the control circuit and the interface for the communication network still working even removing the main (AC supply).

Note: 1) This optional must be factory fitted and orders must specify on the product coding (page 17) the desired option.

RFI Suppressor Filter ¹⁾ (for the VSD to be in Accordance with EN 61800-3 and EN 55011)

CFW11 models with built-in RFI filter, when properly installed, meet the requirements of the electromagnetic compatibility directive – “EMC Directive 2004/108/EC”.

Example: EU CFW11 0007 T 2 O FA Z

For models from frame size A to D, the RFI filter is optional. But for models in frame size E, F, G, and H, the RFI filter is included in the standard product.

Note: 1) This optional must be factory fitted and orders must specify on the product coding (page 17) the desired option.

CFW11 - Dynamic Braking Module DBW03D

The DBW03, with its autonomous capability, allows for the energy to return from regenerative cycles or even from motors when running high inertia load requiring short deceleration times to dissipate it in resistors.

This braking unit was developed specially for VSDs with unavailability of the breaking circuit factory integrated, e.g. frame sizes F, G, H and Modular Drive. Its voltage ranges from 380 to 480 V ac, from 500 to 690 V ac and its main function is to limit DC bus voltage in order to avoid the VSD from tripping due to overvoltage caused by applications where breaking is mandatory.

Braking module model		
	DBW03 0380 D 3848SZ	DBW03 0250 D 5069SZ
Maximum output current	380 A	250 A
Minimum resistor	1.8 Ω	2.6 Ω
External power supply for fans	220 V ac +/- 5% @ 250 mA	

PLC11

PLC Accessories

PLC11 accessory provides the CFW11 with PLC functionality, speed reference generator and motion control functions. It comes in two options: PLC11-01 and PLC11-02 (see differences in the table below).

In many applications, these accessories allows the CFW11 to replace an external PLC, reducing application costs.

CFW11's PLC module installation

PLC11 module

Features

- Motion control with trapezoidal "S" profiles (absolute and relative)
- Machine initial position search (homing)
- Ladder programming through WLP software with timers, counters, coils and contacts
- RS485 serial interface with Modbus-RTU protocol
- 100 configurable parameters available to the user via keypad or WLP
- Master/Slave function (electronic gearbox)
- CAN interface for CANopen and DeviceNet protocols
- CANopen Master, which allows CFW11 to control up to 25 slave devices
- WLP/ WSCAN software: network configuration and programming software in the same environment

Technical Specification

Inputs/Outputs

- Digital inputs
- Digital outputs
- Relay outputs
- Encoder interface inputs
- RS485 interface
- CANopen interface
- Analog outputs
- Analog inputs

PLC11-01

- 9 bidirectional isolated inputs 24 V
- 3 bidirectional isolated open-collector outputs: 24 V dc, 500 mA
- 3 outputs NO contacts: 250 V ac, 3 A
- 2 incremental encoder inputs 5...12 V dc, 500 mA (internal power supply)
- 1 RS485 port (Modbus-RTU available)
- 1 CAN port (CANopen and DeviceNet available)
- 1 differential input: -10...+10 V dc / 0...20 mA, 14 bits
- 2 analog outputs: -10...+10 V dc / 0...20 mA, 12 bits

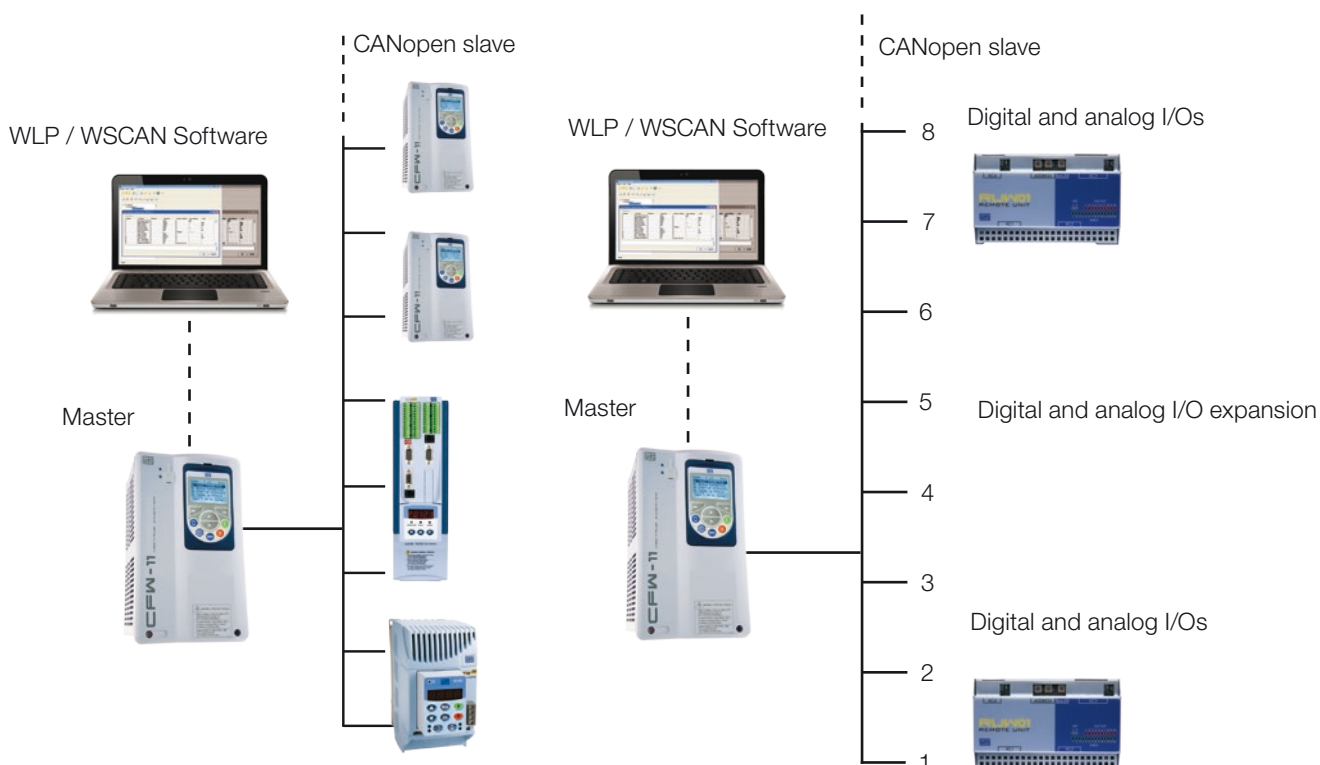

PLC11-02

- 4 bidirectional isolated inputs 24 V
- 3 bidirectional isolated open-collector outputs: 24 V dc, 500 mA
- 1 outputs NO contacts: 250 V ac, 3 A
- 2 incremental encoder inputs 5...12 V dc, 500 mA (internal power supply)
- 1 RS485 port (Modbus-RTU available)
- 1 CAN port (CANopen and DeviceNet available)

PLC11

PLC11-01 as CANopen Network Master

Flash Memory Module

- It stores CFW11 parameters. It ensures that the programming will not be lost as there is a backup of the parameters
- It permits the transfer of parameters stored in the flash memory module to the CFW11 and vice versa. It is an useful function for machine manufactures or in processes where parameter settings are repeated (copy function)
- It stores the applicative software generated by the SoftPLC function

The flash memory module comes as standard on CFW11 series.

USB Connection

Trace Function

Trace function is used to register CFW11 variables (like current, voltage, speed, etc.) when a given event occurs in the system (eg.: alarm / fault, overload, overvoltage, etc.). When a given event takes place, the trigger function activates data storage process. The stored variables can be visualized in the form of graphs by using the SuperDrive G2 software. Trace function simulates a 4-channel oscilloscope. It is a very powerful tool to be used on start-up procedures of systems and on faults diagnosis.

Example of graph visualization screen

Trace function configuration in the SuperDrive G2

SoftPLC Function

It is a resource that provides PLC features to the CFW11 without the addition of any accessories. It provides flexibility to the product, allowing the user to create his/her own applicative software (user's program).

The SoftPLC main features are:

- Ladder language programming using WLP software
- Access to all VSD parameters and I/Os
- Configurable PLC, mathematical and control blocks
- Applicative software download, upload and online monitoring via USB connection
- Storage of user application in the CFW11 flash memory module (see below)
- Memory capacity of 15 kB for user application storage

Simple and practical programming environment

- 49 User parameter settings that can be individually programmed allowing tags, units, minimum and maximum values, number of decimal digits and other characteristics to be changed.

Parameter	Tag	Unit	Minimum	Maximum	D	M	R	S	S	S	S	S	S	S	S	S	S

SuperDrive G2

It is a Windows-based software for CFW11 programming, control and monitoring. The following features are available in the software:

- Automatic CFW11 identification
- Monitoring of CFW11 parameters
- Online parameter changing in the CFW11
- Offline parameter changing in the PC
- Application documents creation
- Trace function (see above)
- Upload of SoftPLC applicative software in the CFW11 flash memory (see page 15)
- Online troubleshooting

This software is available, free of charge, at WEG website.

Monitoring and parameterization of the parameter list. Comparison to factory default is easy.

Integrated environment

Monitoring and command window using virtual Keypad. Start/Stop function, JOG, local / remote, Reverse and reset

4 - Number of phases

S = Single-phase
 B = Single-phase or three-phase
 T = Three-phase

5 - Voltage

2 = 200-240 V
 4 = 380-480 V
 5 = 500-600 V
 6 = 660-690 V

6 - Optional accessories

S = factory model
 O = product with optional accessories

7 - Protection degree

Blank = factory model
 N1 = NEMA 1
 21 = IP21
 54 = IP54

8 - Keypad

Blank = factory standard
 IC = without interface (blind cover)

9 - Braking

Blank = factory model
 DB = with built-in IGBT braking (chopper)
 NB = without built-in IGBT braking (chopper)

10 - RFI filter

Blank = factory model
 FA = with built-in RFI filter
 NF = without built-in RFI filter

11 - Safety stop

Blank = factory model
 Y = with Safety Stop function (STO)

12 - External electronic supply 24 V dc

Blank = factory model
 W = with external electronic power supply 24 V dc

13 - Special hardware

Blank = factory model
 H1 = special hardware
 DC = common / DC Bus Version (without rectifier bridge)

14 - Special software

Blank = factory model
 S1 = special software

15 - End of code indicator digit

Z = end of code indicator

Drive Ratings

Normal Duty (ND) Cycle

- 110% for 60s every 10 minutes
- 150% for 3s every 10 minutes

Heavy Duty (HD) Cycle

- 150% for 60s every 10 minutes
- 200% for 3s every 10 minutes

Sizing the Drive

The correct way to select a VSD is matching its output current with the motor rated current. However, the following tables present the expected motor power for each VSD model.

Use the motor power ratings following only as a guidance. Motor rated currents may vary with speed and manufacturer.

IEC motor powers are based on WEG 4-poles motors, NEMA motor powers are based on NEC table 430-150.

CFW11 - IP54

The CFW11 IP54 features an IP54 enclosure that protects the drive from splashing water, corrosion and dust. Improved cooling fans ensure perfect functionality when operating at maximum loading capacity. Its design is suitable for wall mounting with no need for customized panels allowing for severe environments exposure.

- Chemical Industry
- Petrochemical Industry
- Food Industry

Same communication protocols from the standard CFW11 can be applied on the CFW11 IP54 version.

Note: the operation temperature of the CFW11 - IP54 is from -10 °C to 40 °C (up to 50 °C with 2% current deranting for each °C over 40 °C)

Note: 1) These options must be supplied already installed in the CFW11. See the smart code on page 17 for the solicitation of the options presented above.

Mechanical Mounting

Standard Installation

Frame size	Minimum mounting clearance with top cover			
	A mm (in)	B mm (in)	C mm (in)	D mm (in)
A	25 (0.98)	25 (0.98)	10 (0.39)	30 (0.39)
B	40 (1.57)	45 (1.57)	10 (0.39)	30 (0.39)
C	110 (4.33)	130 (5.12)	10 (0.39)	30 (0.39)
D	110 (4.33)	130 (5.12)	10 (0.39)	30 (0.39)
E	150 (5.91)	250 (9.84)	20 (0.78)	80 (3.15)
F, G and H	150 (5.91)	250 (9.84)	20 (0.78)	80 (3.15)

Note: when one VSD is assembled above another, use the distance A+B and deflect the hot air coming from the VSD below.

Side by Side Installation

Note: for frame size A, B and C: side by side assembly without lateral spacing and with the removal of the top cover.

Mechanical Installation | Panel Assembly

Surface Assembly

Frame size	a2 mm (in)	b2 mm (in)	c2 mm (in)
A	115 (4.53)	250 (9.85)	M5
B	150 (5.91)	300 (11.82)	M5
C	150 (5.91)	375 (14.77)	M6
D	200 (7.88)	525 (20.67)	M8
E	200 (7.88)	650 (25.60)	M8
F	150 (5.91)	1,200 (47.24)	M10
G	200 (7.87)	1,225 (48.23)	M10
H	175 (6.89)	1,350 (53.15)	M10

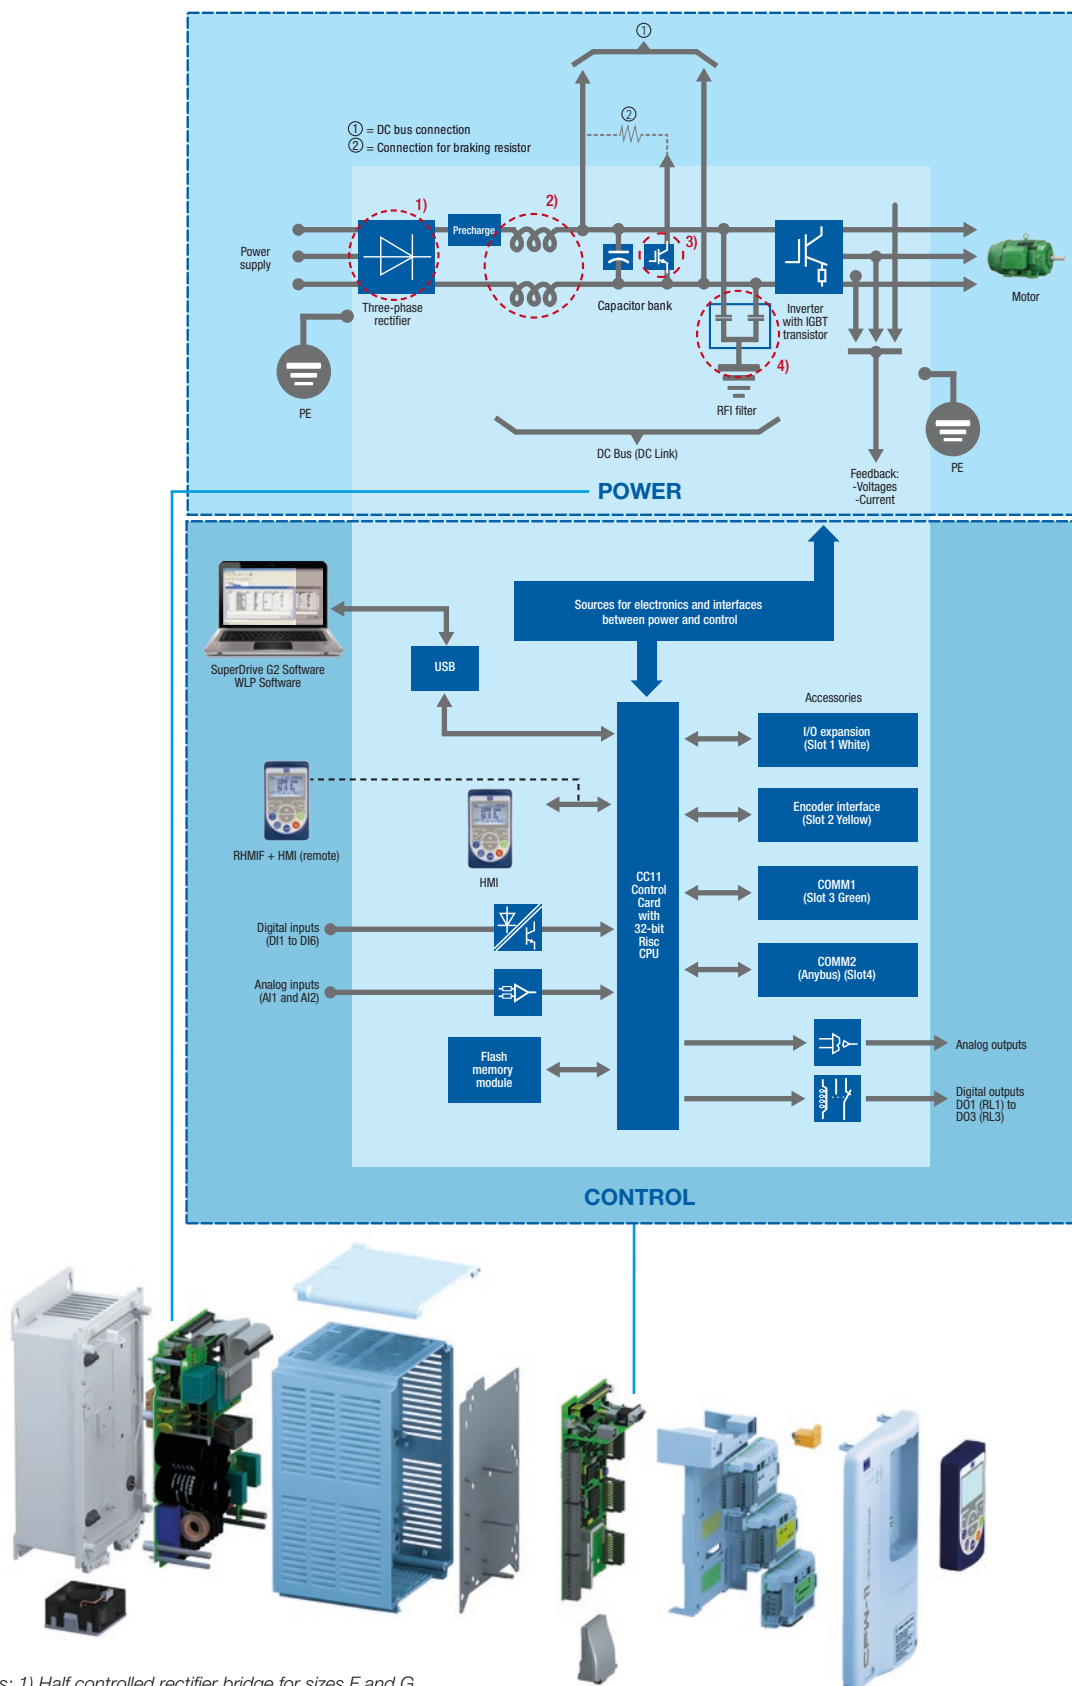

Flange Assembly (IP54 Rated When Mounting the Heat-Sink Outside the Enclosure)

- * From sizes A to E the inverter area that will be outside the panel, has IP54 protection degree.
- * For sizes F, G and H the inverter area that will be outside the panel, has IP20 protection degree.

Frame size	a3 mm (in)	b3 mm (in)	c3 mm (in)	d3 mm (in)	e3 mm (in)
A	130 (5.12)	240 (9.45)	M5	135 (5.32)	225 (8.86)
B	175 (6.84)	285 (11.23)	M5	179 (7.05)	271 (10.65)
C	195 (7.68)	365 (14.38)	M6	205 (8.08)	345 (13.59)
D	275 (10.83)	517 (20.36)	M8	285 (11.23)	485 (19.10)
E	275 (10.83)	635 (25.00)	M8	315 (12.40)	615 (24.21)
F	350 (13.78)	1,185 (46.61)	M10	391 (15.39)	1,146 (45.12)
G	400 (15.75)	1,220 (48.03)	M10	495 (19.49)	1,182 (46.53)
H	595 (23.43)	1,345 (52.95)	M10	647 (25.47)	1,307 (51.46)

CFW11 - Block Diagram

- Notes: 1) Half controlled rectifier bridge for sizes F and G.
 2) Available until frame size G.
 3) IGBT braking (chopper).
 4) Standard RFI filter for sizes E, F, G and H.
 5) Notes 1 and 2 are not available for frame size H and DC hardware version.

Please refer to the user manual for more information.

Technical Data

Power supply and power range		
Voltage and power range	Single phase	220-240 V ac (+10%, -15%) (1.5 to 3 HP) 1.1 to 2.2 kW
	Three phases	220-240 V ac (+10%, -15%) (1.5 to 75 HP) 1.1 to 55 kW
		380-480 V ac (+10%, -15%) (2 to 600 HP) 1.5 to 415 kW
		500-600 V ac (+10%, -15%) (2 to 900 HP) 1.5 to 630 kW
		660-690 V ac (+10%, -15%) (3 to 900 HP) 1.5 to 630 kW
Frequency		50/60 Hz (+/-2%: 48 a 63 Hz)
Displacement factor		Greater than 0.98
Efficiency		Greater than 0.97

Inverter output		
Voltage range	Three phase, 0 up to power supply voltage	
Frequency range	0 to 3.4x motor rated frequency ¹⁾	
Switching frequency	Standard: 5 kHz (frame sizes A, B, C, D); 2.5 kHz (frame size E); 2 kHz (frame size F, G and H) Options available 2.5 / 5 / 10 kHz	
Overload	Normal duty cycle	110% for 1min every 10min
		150% for 3s every 10min
	Heavy duty cycle	150% for 1min every 10min
		200% for 3s every 10min
Time (ramps)	Acceleration	0 to 999s
	Deceleration	0 to 999s

Environment		
Operation temperature	220-240 V ac 380-480 V ac	-10 °C to 50 °C (frame sizes A, B, C, D) -10 °C to 45 °C (frame sizes E, F and G)
	500-600 V ac 660-690 V ac	-10 °C to 50 °C (frame sizes B and D) -10 °C to 45 °C (frame sizes E, F and G) -10 °C to 40 °C (frame sizes H)
	IP54 / NEMA 4X	-10 °C a 40 °C
	Up to 60 °C with current derating for frame sizes A, B, C and D Up to 55 °C with current derating for frame size E, F, G and H >> 2% current derating for each °C over the base temperature Up to 50 °C with current derating for IP54 / NEMA 4X (For frame size H, between 40 °C and 45 °C the derating is 1%)	
Humidity		5 to 90% without condensation
Altitude		0 to 1,000 meters Up to 4,000 meters with current reduction (1% for every 100 meters above 1,000 meters)

Protection degree	
IP21	Standard for frame sizes A, B, C. For frame size D the top cover kit has to be added. Frame Sizes E, F, G and H option not available
IP20	Standard for frame sizes D, E, F, G and H. Frame sizes A, B and C the top cover has to be removed
NEMA1	Standard for frame size D Optional for frame sizes A, B, C, E, F and G
IP54	Frame sizes 1, 2 and 3

Braking methods	
Rheostatic braking (chopper)	Supply available built-in or with external module (DBW03)
	External braking resistor (not provided)
Optimal braking	Does not need braking resistor
DC braking	Direct current applied to the motor

Performance		
Speed control	V/F	Regulation: 1% of rated speed Speed variation range: 1:20
	Voltage vector (VFW)	Regulation: 1% of rated speed Speed variation range: 1:30
	Sensorless vector	Regulation: 0.5% of rated speed Speed variation range: 1:100
	Vector with encoder (with accessory ENC-01, ENC-02, PLC11-01 and PLC11-02)	Regulation: ±0.01% of rated speed with 14-bit analog input (IOA)
		Regulation: ±0.01% of rated speed with digital reference (keyboard, serial fieldbus, electronic potentiometer, multispeed)
		Regulation: ±0.05% of rated speed with 12-bit analog input
Torque control	Sensorless vector	Range: 10 to 180%
		Regulation: ±5% of rated torque
	Sensorless vector	Range: 20 to 180% Regulation: ±10% of rated torque (above 3 Hz)

Inputs and outputs (I/Os) in the standard product		
Inputs	Digital	6 isolated inputs, 24 V dc, programmable functions
	Analog	2 differential inputs isolated by differential amplifier, programmable functions
		Resolution: - AI1: 12 bits - AI2: 11 bits + signal
		Signals: 0 to 10 V dc, 0 to 20 mA or 4 to 20 mA
Outputs	Relay	Impedance: - 400 kΩ for signal 0 to 10 V dc - 500 Ω for signal 0 to 20 mA or 4 to 20 mA
		3 relays with NO / NC contacts, 240 V ac / 1A, programmable functions
	Analog	2 isolated outputs, programmable functions
		Resolution: 11 bits Load: 0 to 10 V: R _L ≥ 10 kΩ 0 to 20 mA or 4 to 20 mA: R _L < 500Ω
Available supply to user		24 V dc + -20%, 500 mA

Note: 1) This maximum value can change according to the used control mode and switching frequency. The maximum permissible speed is 18,000 rpm.

Technical Data

Communication	
Profibus-DP	Profibus-DP-01 (slot 3)
	PROFDP-05 (slot 4)
DeviceNet	CAN/RS485-01 (slot 3)
	CAN-01 (slot 3)
	DeviceNet-05 (slot 4)
CANopen	CAN/RS485-01 (slot 3)
	CAN-01 (slot 3)
CANopen Master/Slave	PLC11-01 1, 2 and 3
Ethernet / IP	ETHERNET/IP-05 (slot 4)
Modbus-TCP	Modbus-TCP-05 (slot 4)
Profinet IO	PROFINETIO-05 (slot 4)
Modbus-RTU (RS485)	RS485-01 (slot 3)
	CAN/RS485-01 (slot 3)
	RS485-05 (slot 4)
Modbus-RTU (RS232)	RS232-01 and RS232-02 (slot 3)
	RS232-05 (slot 4)
USB	Built into the standard product
	Communication with SuperDrive G2 software
	Communication with WLP Software used for programming and monitoring the SoftPLC function and the PLC11 accessories

Safety standards
UL 508C Power conversion equipment
UL 840 Insulation coordination including clearances and creepage distances for electrical equipment
EN 61800-5-1 Safety requirements electrical, thermal and energy
EN 50178 Electronic equipment for use in power installations
EN 60204-1 Safety of machinery. Electrical equipment of machines. Part 1: General requirements. Note: in order to have a machine in conformity with this norm, the machine manufacturer is responsible for the installation of an emergency shutdown device and an equipment for network sectioning
EN 60146 (IEC 146) Semiconductor converters
EN 61800-2 Adjustable speed electrical power drive systems - Part 2: General requirements - rating specifications for low voltage adjustable frequency a.c. power drive systems

Mechanical construction standards
EN 60529 - Degrees of protection provided by enclosures (IP Code)
UL 50 - Enclosures for electrical equipment

Protections
Overcurrent / short circuit
Under / overvoltage in the power circuit
Phase loss
Overtemperature in the VSD (IGBTs, rectifier and internal air in the electronic cards)
Overtemperature in the motor
Overload in the braking resistor
Overload in the IGBTs
Overload in the motor
Fault / external alarm
Fault in the CPU or memory
Phase-to-ground short circuit at the output
Fault in the heatsink fan
Motor overspeed
Incorrect connection of encoder

Electromagnetic compatibility standards (EMC)
EN 61800-3 - Adjustable speed electrical power drive systems Part 3: EMC product standard including specific test methods
EN 55011 - Limits and methods of measurement of radio disturbance characteristics of industrial, scientific and medical (ISM) radio-frequency equipment
CISPR 11 - Industrial, scientific and medical (ISM) radio-frequency equipment Electromagnetic disturbance characteristics Limits and methods of measurement
EN 61000-4-2 - Electromagnetic Compatibility Standards (EMC) Part 4: Testing and measurement techniques - Section 2: Electrostatic discharge immunity test
EN 61000-4-3 - Electromagnetic Compatibility Standards (EMC) Part 4: Testing and measurement techniques - Section 3: Radiated, radiofrequency, electromagnetic field immunity test
EN 61000-4-4 - Electromagnetic Compatibility Standards (EMC) Part 4: Testing and measurement techniques - Section 4: Electrical fast transient / burst immunity test
EN 61000-4-5 - Electromagnetic Compatibility Standards (EMC) Part 4: Testing and measurement techniques - Section 5: Surge immunity test
EN 61000-4-6 - Electromagnetic Compatibility Standards (EMC) Part 4: Testing and measurement techniques - Section 6: Immunity to conducted disturbances, induced by radio-frequency fields
